My local RS store says the PRO-197 has yet to be released. Does anyone have any idea when it will be released and the retail price???

And probably priced at $499.99 (since the pro-106 is that cost)
Just my guess.

Our local RS manager and a good friend ordered his and they are expected on
the fed ex truck later this week.

I haven't seen an FCC Type Acceptance on it yet, so it could be a couple months yet... I don't know if it would qualify under the PSR-600's type acceptance, but I doubt it.

Looks pretty much identical to the PSR-600, so that would explain why a type acceptance wouldn't be needed.

8. Seeking PRO-106 / 197 Beta Testers for SC Version 7.0

Yahoo group: PRO-197
Date: 2008-10-21 13:02:10 UTC
From: kend_2
Topic: 8 Message: 8

ScanControl software (www.scannersoft.com <http://www.scannersoft.com/>) has been supporting the Uniden line of scanners for many years. Our next release, Version 7.0, will be adding support for the GRE line of digital scanners.

We are in the final stages of development and unit testing for ScanControl Version 7.0. The most significant enhancement in this version is the addition of support for the GRE PSR500 and PSR600 digital scanners and their Radio Shack equivalents, the PRO-106 and PRO-197. We'd like to line up a small number of beta testers for the GRE support in this version.

Before you "jump in" and offer to help with beta testing please read the conditions under which we are requesting your help below:

1. No support will be provided for the Ver. 7.0 beta. We will collect all bug reports and incorporate the fixes into the final release.

1. We are only requesting testing of the GRE radio functionality. We are not beta testing any of the Uniden changes that will be in this release.

2. The user documentation and Help screens for the GRE support are not available yet. The intuitive user interface and built in "mouseover tips" provide some pretty solid guidance so I don't think anyone will be totally in the dark.

3. The 7.0 beta version will not include support for data file translation between Uniden and GRE, Control / Monitoring, Rebanding or CSV Imports. These will come later. The DataGrabber for GRE is included.

4. We're especially interested in testing the R/S PRO-106 and PRO-197 so if anyone out there has these units we could use your help.

The goal is to verify the basic editing, programming, loading, file saving, etc. are solid so we need users to exercise these functions.

If you are interested and able to beta test please send a direct email to moderator@... <http://groups.yahoo.com/group/ScanControl/post?postID=GUJlp5Efz8tD8RxyB\8NwY9q-dJKp1PzEBRWox5BzbdhZBmLRwUMsAlpyfZ7h1ZFeK72z08V2OJBJB9yXtr_G> requesting more information. Please do not reply through this User Group board as this will only slow our abiliy to respond. We expect to have code to test by the end of this week.

Thanks in advance to those who wish to participate.

Ken D.

Topic: 9 Message: 9

Hello,
New to the group. I just bought a 197 at the local Radio Shack on Friday (had to order it) and will hopefully come in next week. I used the Friends and Family coupon for it and only paid 349.99 before taxes for it. Can't wait till it comes, I assume since it is being sold online and in stores the FCC approvals must have come in for it.

It's pretty much identical to the PSR-600 with a different face plate...
The FCC approval for the PSR-600 applies to the Pro-197...

Congrats on your purchase, I hope you enjoy it.

email sub and it is on sale this week for $399.99 bring price in @
279.99. Also had to order usb program cable. Both were in stock @
warehouse. To be delivered to house @ no extra charge.Review to follow.

14. What a steal!

Yahoo group: PRO-197
Date: 2008-11-08 00:58:13 UTC
From: Chuck
Topic: 14 Message: 14

Last Sunday, the price of the Pro-197 dropped to $400 and with the RadioShack Friends and Family coupon from e-mail, that made the price of the Pro-197 a whopping $280 before tax. Needless to say, I grabbed several at this price.

My order arrived Wednesday and I have been very pleased with the first unit out of the box and programmed. It seems a little more sensitive than my companion PSR-500. The audio is good and I'm only using the first one in my living room at present. I couldn't get it to clone from the PSR-500, but that may be because I was using a mono cable and it may require a stereo cable. However, I used PSREdit to easily upload my files from the PSR-500 into the Pro-197.

The CPU seems to be current as I can see radio IDs on trunked systems and I can tag these radio IDs, too, as I can with the PSR-500.

This is a great radio.

73, Chuck, N2DUP | scanning1.com

16. New Pro-197 Odd Issue

Yahoo group: PRO-197
Date: 2008-11-19 02:01:22 UTC
From: BadAndy
Topic: 16 Message: 16

Hi all,

I just got my new radio this past Friday. I've programmed it and have been using it without any issues until Sunday evening when I noticed that it just went deaf. I power cycled the unit and it came back to life. Just last night it did it again. I looked at the display and see that it's stuck on a conventional object, yet there is no S or signal level present. I hit the SCAN button and it moves to the next object, again, stuck on it, no sound, no signal, but the display says >>>>SCANNING<<<<. OK, so I tried hitting the search key and it's just sitting on the first frequency not going anywhere again with no S for signal. I can turn the squelch knob all the way to the left and get a plain S symbol, but no bars and what's more, no sound. I hit the WX button and same thing occurs. I went ahead and did an Pwr On, 0, 1 and then did a Pwr On, 0, 2 and cleared everything out. Still does the same thing. I loaded up one of the local area VScanner files and it does the same thing. Cleared it all out again, and reloaded my saved file from WIN500 and same thing. I disconnected the antenna and got the same thing. Global Attenuation is off and I know the unit is programmed properly as it was working just fine a day or two ago with no changes made prior to this occurring. Any ideas?

Thanks,

Andy

You can also try pressing man to see if you can manually select the frequency that is causing it to stop. The Pro-197 is very very sensitive and will pick up the weakest of signals around your location. Mine picks up my wireless router and my cordless phone so I have to lock out some frequencies or turn on the Att or change the location of the scanner and make sure the squelch it turned up enough.

19. Inverted Display Issue

Yahoo group: PRO-197
Date: 2008-11-23 16:09:16 UTC
From: Steve Olmstead
Topic: 19 Message: 19

Hello all,

I've been a Pro-197 user for a couple of weeks now. At this point I'm very happy with its performance.

With that being said... today I came across an issue. The radio had been on for a few hours when I glanced up at the display and all the characters were inverted.

Display Photo >> http://picasaweb.google.com/solmstead

Should I be concerned? I turned the radio off then back on and all is fine now.

Steve

Actually, that is mirrored, not inverted.

I wouldn't be concerned unless it happens again.

From: wowxxi2002
Topic: 21 Message: 21

I just noticed RS dropped the price on the PRO 197 through 12/25.
Guess its time to take the plunge to digital scanners. My first time.
So which software is easiest to use for the digital scanner novice?
ARC500 or WIN500?

I wonder if the PSR-600 will also go on sale? Any ideas?

Thanks,

Nobody knows GRE scanners like Don Starr (Win500).

There is also PSREdit that is available.

I have used the Win 500 and PSREDIT and ended up buying PSREDIT.
They both have a 30 day trial. I would download and play with them
for a while and then decide the one that works best for you.

26. ScanControl Software Version 7.0 Adds Support for PRO-197

Yahoo group: PRO-197
Date: 2008-12-07 19:35:18 UTC
From: kend_2
Topic: 26 Message: 26

ScanControl Version 7.0 from 3D Technologies is now available with support for the Radio Shack PRO-106 and PRO-197 and the GRE PSR-500 and PSR-600. This brings the total number of supported radio models to 21 for this one radio programming software package.

ScanControl is the only low cost, easy to use software made in the USA that supports the GRE PSR-500, PSR-600, the Radio Shack PRO-2052, PRO-106 and PRO-197, and the Uniden BC95XLT, BC245XLT, BC895XLT, BC898T, BCT8, BC780XLT, BC250D, BC785D, BC296D, BC796D, SC230, BC246T, BCD396T, BR330T, BCT15 and BCD996T scanners.

For details about this release go to
http://www.scannersoft.com/whatsnew.htm
<http://www.scannersoft.com/whatsnew.htm> .

27. Pro-106 vs Pro-197

Yahoo group: PRO-197
Date: 2008-12-11 18:07:05 UTC
From: anthonyh71
Topic: 27 Message: 27

Just curious if anyone here has both the Pro-106 and the Pro-197.
Does the Pro-197 pick up signals better or same as the Pro-106?
I would think that the Pro-197 might pick up better or with less
static.

I have all four of them..... both RS's and both Unidens....as well as a Icom pcr2500 with a card.
I can't get any of them to work as good as analog..... Likely just me..... (I favor the RS 197)

The PRO-96 / 97 / 2055 / 2096 overload in the VHF range and you have to use the ATT button to correct it. Press MAN then ATT to make a check of signal level. IF you ATT and the signal drops to -0- then press it again to bring it back. If using an outside antenna you should ATT all VHF freqs. My wife has a 97 and I have a 96 and 106. The 106 does not seem to have this VHF overload problem. If you use an outside antenna it should not be more than a MAXSCAN 1000. The scantenna and larger ant's overload bad. Good Luck. Larry

Yes, that is my problem too. The county I am in just went from 800 analog to digitial. I bought the Pro-106 and tried everything with it to get the new digitial system but just could not get a good signal at my house. I could get a decent signal in the car so i knew it wasn't the scanner. I ended up returning the Pro-106 back to radio shack for a refund. They didn't have the Pro-197 in stock, but that was why I was wondering if maybe the Pro-197 might give me a better signal on reception. Or even if the GRE models had better reception.

I have some 800MHz base antennas that I will put on Ebay in January. Waiting on all the hardware to come in. It is a 23", Dual Coil, 5db gain, 1/2wave over 1/2wave over 1/4wave. It will have a ground plane base and is brass NMO hardware that termanates to an "F" connector for RG6. Projected price will be $39.00. I will post here when I get them ready.

Topic: 27 Message: 35

A friend of mine works at Radio Shack and programmed a Pro-2096 for a lady and tested it in the store and showed her how it works. She took it home and found a spot next to her chair and plugged it in and nothing it didn't work. The RS employee drove to her home to see if he could figure out the problem and it was the location in her home. She didn't know and he didn't tell her that you may not just be able to pick a spot and have it work. You have to find the right spot to place the scanner. So he went to the tower freq to see if it was picking up the tower and it wasn't. He moved the scanner just a few inches while watching the data channel until it was showing 99%.

The scanner has to be able to pick up the tower freq (or data channel)at or near 99% or the scanner will not work on a trunking system.

Huh?

Assuming you mean PRO-197 vs PRO197, the latter group only has 16 members, but they are more than welcome to join this group.

I have several Motorola Type II and Apco-25 trunked radio systems that I routinely scan from a distance and I receive between 30% and 90% packet decode and they work just fine. Obviously, the better the packet decode rate the better the chance the scanner will tune to an active voice channel, but your statement, "at or near 99%" just isn't true in all cases.

Andy

From: Chris
Topic: 40 Message: 40

I am trying to find a software package that will do unattended logging. Ideally (but not realistically) it would match frequency, time, date with PL, DPL, NAC, TRS ID (TG & SYS ID), LTR ID.

I have downloaded and tried ARC500, WIN500, ScanControl 7, but at this time, they don't do logging. (ScanControl does promise it in a future release) WIN500 seems to log only the freq, time, OBJ ID, Alpha tag.

I have not tried PSREdit but went through the pages of posts and searched the Yahoo site and haven't seen any reference to what I need to do.

From: Chris
Topic: 40 Message: 43

The PRO-197.

If I do an unattended search, I want to not only find and record new, active frequencies but to also log PLs, DPL, NAC, etc. If a data channel were to be found due to skip or other reason, I would want to know what type of trunked signal was seen on the frequency. Since I know almost all of the trunking systems I can regularly receive, I am less concerned about talkgroups and more interested in what type system I am seeing (I can sit and TG search later).

I use or have used LTR Analyzer, LTRTrunk, Trunker, ETrunk, Unitrunker, Treport, TRUNK88, Trunkview, etc. The big problem is that these all work independently of each other and the radio search/control software. I want to see, at a minimum, a single log of frequency, subaudible/audible data, and time/date. Older scanner software did the PL/DPL search with logging so I'm sure it can be done.

I have previously used several computers sharing the signals for recording/logging and decoding. I just match the times on the two machines but it still takes a substantial amount of time to clear data.

Chris, Have you tried Pro96com it's excellent, what scanner will you be using it with and what type of radio systems will you be trying to log?

Jim<

From: PRO-197@yahoogroups.com [mailto:PRO-197@yahoogroups.com] On Behalf Of
Subject: [PRO-197] Logging through software

I am trying to find a software package that will do unattended logging. Ideally (but not realistically) it would match frequency, time, date with PL, DPL, NAC, TRS ID (TG & SYS ID), LTR ID.

I have downloaded and tried ARC500, WIN500, ScanControl 7, but at this time, they don't do logging. (ScanControl does promise it in a future release) WIN500 seems to log only the freq, time, OBJ ID, Alpha tag.

I have not tried PSREdit but went through the pages of posts and searched the Yahoo site and haven't seen any reference to what I need to do.

Don't forget, if you use the code 20STUFF08 you get an EXTRA 20.00 off at Radio Shack.
It can be used on the web site, with their 800 number order desk, or in the stores.

I just received my PRO 197 today here in Ohio that was ordered the 18th.
Just 279.99 plus tax with 2 day FREE shipping.

The reviews have me enthusiastic about the Pro-197 I just ordered today at such a steal of a price after getting the 96 last year for $349. I am one that has manually programmed my 96 and the ancient 94. Is that something you can still do with the Pro-197 or do I need to become a techhy??

You can, but you have a lot more potential programming to do.

My PRO197 arrived today. I read the manual, downloaded Win500, installed the USB cable and entered my frequencies in the software prior the the scanner's arrival. Took about 2 hours to figure out and enter the data into the software -- just the basics, still learning the finer points. I had no prior experience with this before, but did have some basic knowledge of manually programming a much simpler scanner. Believe me.... you want to do the programming via the PC.

What I would suggest is getting a data file for your favorite software (eg Win500) from a local scanner friend and see how they have it set up. I will help you immensely in learning how to use the software.

Hello and a wish for all us RS PRO197 oweners/scanner lovers-Happy Holidays. Anyway, wanted to post a message- i spent 8 hours manually entering conventional style frequncies-i downloaded Win500 and hit a wrong button and erased everything. however, i hit another button and it uploaded from my computer to scanner 389 frequencies for dutchess county, NY. Text was even included. i had only 55 frequencies manually and no text. Win 500 is a necessity...i think...when i figure out what that "button" is thats executing a upload or download...Thanks to the group- our membership is on a steep veritical incline...these ic stormes have my scanner going crazy...

So, Lynda, are you saying that you have not-so-smart children and grandchildren, too, and this is just baffling the smart ones? <grin>

You will need a cable to connect the PRO-197 to the USB port on your PC. They are available for $32.99 at Radio Shack (Cat No 20-047) : <http://www.radioshack.com/product/index.jsp?productId=2177609> http://www.radioshack.com/product/index.jsp?productId=2177609 . It's worth reading the product reviews on this item (there is a link on that page). Some folks experience difficulties setting up the cable.

If it was me, I would buy the cable first, get it working, then download Win500. If you can't get the cable going, the software won't do you much good.

You can download a free trial of Win500 at <http://starrsoft.com/software/win500/default.asp> http://starrsoft.com/software/win500/default.asp . The free trial is good for 30-days. After that you must register it for $35. Try it before you buy it as there are no refunds. While parts of Win500 are intuitive, there are many less-than-obvious options. And there is NO manual available. However, RadioReference has a support forum that is useful.

Something that helped me was to get a copy of a local scanner friend's ".p500" file that shows how they set up their copy of Win500. Best to get it from someone who is listening to many of the same things you intend to monitor as you will recognize the frequencies, talk groups, agencies, etc.

Holler if you need help. Don't downgrade.... they are all complicated to program these days! Win500 makes it much easier, though on first blush you might not think so!

I just purchased a 197 and the scanner is wonderful, but when I transfer the data from WIN500 to the scanner I'm not hearing anything? I live in Southeast IN and about the only thing that is digital 800 around here is the IN state police. I should be hearing something but I'm not!! LOL I did the import thing from radio reference to WIN 500 then made them my scan list 1 transferred it and its in the scanner but I'm not hearing anything!!! Well, I did hear 2 dispatches from the state police but lord there should be more than that. I'm not sure If I've got the talk groups not right? Someone said I should go from G to A (Global to ATT) I've done that and stil the same. I'm really new to this and like Lynda CONFUSED!!! I've had scanners for 17 years but nothing like this!!! Thanks for any help

>> this new one is baffling even my SMART children and grandchildren.

So, Lynda, are you saying that you have not-so-smart children and grandchildren, too, and this is just baffling the smart ones? <grin>

You will need a cable to connect the PRO-197 to the USB port on your PC. They are available for $32.99 at Radio Shack (Cat No 20-047) : <http://www.radioshack.com/product/index.jsp?productId=2177609> http://www.radioshack.com/product/index.jsp?productId=2177609 . It's worth reading the product reviews on this item (there is a link on that page). Some folks experience difficulties setting up the cable.

If it was me, I would buy the cable first, get it working, then download Win500. If you can't get the cable going, the software won't do you much good.

You can download a free trial of Win500 at <http://starrsoft.com/software/win500/default.asp> http://starrsoft.com/software/win500/default.asp . The free trial is good for 30-days. After that you must register it for $35. Try it before you buy it as there are no refunds. While parts of Win500 are intuitive, there are many less-than-obvious options. And there is NO manual available. However, RadioReference has a support forum that is useful.

Something that helped me was to get a copy of a local scanner friend's ".p500" file that shows how they set up their copy of Win500. Best to get it from someone who is listening to many of the same things you intend to monitor as you will recognize the frequencies, talk groups, agencies, etc.

Holler if you need help. Don't downgrade.... they are all complicated to program these days! Win500 makes it much easier, though on first blush you might not think so!

Hi,

Where do I download or buy the Win 500 and how much does it cost? And what about the port?

I may have to down grade if I can't figure out how to program my Pro 197. My

old scanner wasn't digital and this new one is baffling even my SMART children and grandchildren.

Hi Larry,

Thanks for the friendly humor and advise. I need all I can get of both.
I can't believe this Pro 197 has so many extras. My old unit which is
OLD.....a Pro 70.
I still use it for local stuff. But the Ky State Police I can't pick up
that's why I went digital but lordy! all the confusion. Hope I can deal with it.
<grin>

Say, if I did down grade what would any of you reccomend? Please no
whistles and bells....I don't need all the extra stuff. Just something to enter the
frequencies and listen to what goes on out here in the boonies (17 miles
out of town) where we live.

Lynda, I'm afraid you'd have to ask someone else about what scanner you should get if you downgrade. I really think you ought to try to get this one to work, particularly if you got it during the recent sale when it was almost half price. Downgrading may actually cost you more $$ in the long run.

Hi everybody! I just purchased a new Radio Shack Pro 197. I also purchased the usb programming cable direct from GRE America and I purchased a CD of the Butel ARC500 programming software from Scannermaster. I live in Honolulu, Hawaii. Unfortunately I don't have a lot of time to devote to programming the scanner and would like to know the best way to get it fully programmed for my area. I have a computer running Windows Vista Ultimate 64 bit operating system. What would you suggest? I am not against paying for this but if it can be done for free online,that would be nice too. Please advise,Thank you.

The drivers for the GRE cable should be in Vista, however, insert the CD and let it complete loading. Then plug cable into USB you should get indication of new hardware and that it is ready to use.

Turn on scanner and plug cable to PC/IF port, run ARC500, press Download icon, Open Windows Device Manager at bottom of download dialog, expand + at Ports (Com & LPT). A Serial to USB port number should be listed. Set this number in the select pulldown next to stop in ARC dialog.

You can now download the blank scanner memory to ARC or better yet, close ARC Download dialog and use the Trunk or Conventional icon to load data to software from Radio Reference. You will need a subscription to RR to use this feature.

Enjoy the scanner and software.

Currently, I my scanner (Pro-197) does not provide any audio when scanning Washington DC's trunked system. I see that it is locking on the dispatch group, pausing, them moves on to another talkgroup.

What makes this odd is that I do get audio when checking NOAA radio.

Any ideas?

Paul

Hello to grp,
New Pro-197 owner, Nashville Tn,loaded V-folder for Nashville, recving PD/PS but some talk groups are missing.

I forget procedure, but with my old Pro-96, i could enable it to find or add new talk grps on same system (open vis closed) maybe?

I've been thru manual twice and so far haven't found method for 197?

Does it exist if so how do I do it. ALSO last night we had a system frequency with nothing but white noise. I locked it out, but now can nt figure how to UN Lock.

any help appreciated

Just picked up my scanner yesterday. I had already downloaded the manual and PSR-500 (I tried a couple and liked that one) last week. After reading the manual (numerous times) and populating the software via Radio Reference import, I had my scanner up and running within a half hour of opening the box. I can't imagine programming by hand. Spend the $15 and get a 6 month full membership to RR and import to your heart's content. Happy scanning to all. - Joe (Medford, NJ)

Create a wildcard object in the TSYS. This will be similar to open mode on the Pro-96.

Topic: 77 Message: 77

Hello, I have a question which is almost embarrasing to ask. i did it correctly the first day i had the pro-197, but I accidentally erased everything i had in my scanner, by tring to add to what i already had in it. My question is this: how do I enable the scan lists once I download from RR. I have the Win500 programmed whith much of what i want in terms of conventional frequencies, i can upload this info to my pro-197, its in there, i just cant figure out how to Enable these conventional frequencies in my scan list. Thank you!!!
P.S. if i put the frequencies in manually one by one using keypad i can scan the list i create. I have the premium membership to RR. wont let my scan data from RR- how do i enable my scan list from Win500 & RR?

If you've DLed the data and assigned the scanlists, and programmed the scanner, just hit the number on the keypad while scanning to enable/disable scanlists. 1-10 is that number alone. 11-20 is FUNC followed by that number.

If you haven't assigned the scanlist, look at the TSYS tab. At the bottom will be the talkgroups. Select ALL to display them all. Assign the scanlists by clicking which list(s) to want that TG assigned to. The available lists will be just to the right of the TGs.

The Programming interface using the computer works with full configurations of the scanner. When you upload a configuration to the scanner it will overwrite what's there with the new information.

If you want to add to an existing configuration, open the file that has that configuration, or download the existing configuration from the scanner before making modifications to it.

Once the old configuration is in the program, then do your import from the RR web service, assign the imported objects to the scan list of your choice, and then upload the new configuration to the scanner and you should be all set.

Hello. Can i use this protuct (in-line RS signal amplifier) with my RS pro-197 and RS 20" discone antenna? can i use Silicone Rubber Sealant on all connections? does this sound like a good system? Thank you so very much for a responce!!!

I think you run the risk of overloading the front end of the pro-197 using a amplifier. I experienced problems with just the back of set antenna, also I briefly owned a pro-2096 and used a scantenna at 35 feet (with no amplifier) and the radio went mostly deaf. These radios are very subject to overload and intermod, depending on your monitoring location. I own the pro-197 but it is not on an external antenna and does have good sensitivity.
I am sure others will comment on this.

I will only post to say "very well put." I know people who had the exact
same experience.

Rule of thumb for using outside ant with 197 is this: Use Global ATT. This will allow the heigth of the antenna to receive stations at a distance and ATT will keep locals from overdriving the frontend of the receiver. Never use an amp because it will also amp the noise level in addition to signals. Only at 800 MHz using a yagi pointed at a distant tower would you consider an amp. AND maybe a GAIN antenna would be better than amp. Good Luck, Larry

Just got my new Pro-197 for Christmas and am very pleased. Learning more about it everyday.

I do have a question about the firmware. Somewhere on the www I came across the key stokes needed to display the firmware version. Needless to say I did not save the information. Can anyone tell me the correct key combination or point me in the right direction to same.

Thanks

No, you can enter frequencies like that if the FlexStep feature is
turned on, but the step sizes are fixed on the searches.

Besides - why would you want to? Everything in that band segment uses
12.5 kHz channel spacing.

95. Antennaes

Yahoo group: PRO-197
Date: 2009-01-12 20:31:59 UTC
From: brwellwood
Topic: 95 Message: 95

I've now had my Pro-197 for about 10 days and it's been great programming it and much easier than others have made it sound. Totally blows away the Pro-96 which I've had for one year now. I have the simple Radio Shack discone antennae(the $28 three legged one) set up in my bedroom for now on the ground floor and hooked up with the Pro-197. With a 2 story house, how much would it benefit to attach it to the current TV antennae mast on the roof and would having the TV antennae on the same mast distort any signals. (Of course after TV goes digital, the TV antennae may come down if it doesn't work.) Thanks for all the great info in this group!

A few comments.

1. If it's the antenna I'm thinking of, it's a Ground Plane and not a Discone.

2. DTV will be using (in general) the same frequencies as analog TV, so your existing TV antenna should work fine. They may use different channels than they do for their analog signals, but the TV bands will be mostly the same as they have been for decades. There are no 'new frequencies' that your existing antenna does not cover unless it's a "UHF only" antenna or something like that. There is no such thing as a "DTV antenna". It's a marketing gimmick just as the "Color TV Antenna" was back in the 60s. People were told your antenna had to be "color" to receive the color signals - some antennas were actually made from colored aluminum! They worked exactly the same as natural colored aluminum antennas.

3. Putting your scanner antenna above the TV antenna should work fine. I would just make sure they do not 'overlap' - make sure the scanner antenna is a foot or more above the TV antenna at the closest point.

Joe, Thanks for the comments, especially regarding the DTV. My TV antennae gets great reception now and I'd hate to fork over $$$ to replace it.

The TV antennae sits at the top of the mast, so my scanner antennae would have to go below it. Would it work just fine if it were a foot below it and not overlapping just as if it were above it? Also, how much better do the scanner antennaes work outside on a mast than in a room or even an attic?

Again, thanks for any input.

Again, if that's the one with the radiator that sticks straight up, you would have to mount it on a standoff to get it away from the mast. I would recommend moving the TV antenna down and putting the scanner antenna on the top.

BUT, maybe it's not the antenna I'm thinking it is. Do you have a catalog number for the one you have? Or a URL?

100. Text turned upside-down on PRO-197 LCD

Yahoo group: PRO-197
Date: 2009-01-15 01:31:36 UTC
From: rds_6
Topic: 100 Message: 100

I just looked over at my PRO-197 and the text in the LCD was upside down. It wasn't just a line-by-line/character-by-character inversion, but rather entire display (except for the T-G-A-S-bargraph-arrows fixed icons) was upside down, such that, if I turned the scanner upside down, I'd see a mirror image of the display (i.e., reversed left-to-right).

I'm pretty sure the high RF fields that tend to follow me around had something to do with it. I was keying a five-watt VHF HT in both analog and P25 digital modes within a couple of feet of the PRO-197.

Curiously, my PRO-106 was within about a foot of the HT and was connected to an external power source (with a power cord having a large ferrite cord molded to it two inches away from the PRO-106's power jack) and it had no problems at all. I think I'll add some snap-on ferrites to the PRO-197's wall wart power cord and to my homemade RS-232 cable for the PRO-197 and see if that improves RFI immunity.

From: Jharrell
Topic: 100 Message: 102

Hello,
I have a very simple question, can a Pro-197 be hooked to a outside antenna without having to turn on the global attenuator? I have one hooked to a outside antenna and on most of my VHF conventional frequencys all I hear is the NOAA weather channel coming through 162.525. I don't want to buy a notch filter for the radio as I paid enought for it and it should have come with one. I am very disappointed with Pro-197 and I should have taken it back to the store shortly after buying it. I know next time to stick to the Uniden models. Any one got any Ideas, as this thing is about to drive me nuts?

If it keeps up you might just see it listed!!

Joey

It would work fine if you're in a rural area. I suspect you are not, and are not far from the NOAA TX.

104. Basic Set-up Help

Yahoo group: PRO-197
Date: 2009-01-17 15:03:13 UTC
From: Wyes Guy
Topic: 104 Message: 104

I just purchased a Pro-197. I simply want to monitor a few frequencies here in Maryland. I can find most of them in the V-Scanner folders.

The frequencies I listen to are mostly contained in 2 different V-Scanner folders, # 1 and # 17. When I bring up #1 [DC-MD-VA], the system reboots and I then bring up only the scanner lists I want to use [Anne Arundel and Howard County]. I can scroll thru the scanner list to see the actual activity 'Objects" I want to monitor [Anne Arundel Co and Howard Co Police channels]. Following the instructions on page 43 of the manual, I press FUNC and FAV on each item to save it in my Favorites Scan List, so all I'll need to do is scan my Favorites List from then on [I hope].

My difficulties are these:

1. When I press FUNC and FAV, I am supposed to select YES to add it the Favorites, according to the instructions. However, I am not prompted on the display to do so. It seems to be doing it, as I can scan the Favorites afterwards

2. When I want to add items from a different V-Scanner folder, the system reboots and my Favorites List is wiped clean. All I'm able to do at this point is temporarily save objects from any single V-Scanner folder.

I'm not a sophisticated user, but this unit seemed easier to operate than the Pro-2096, which is why I chose this one. What am I missing? Any ideas would be very helpful.

Thanks
Karl

You would not want to use the Global setting for VHF. Go to each VHF freq and set the ATT. It takes a little time to do this but will most likely solve your problem. GRE scanners overload on VHF with antenna other than factory supplied item. I live in a strong RF area and also use outside antennas. Been there-done that. Good Luck.

You're missing software to program what you want in your scanner (unless you want to program it manually).

Using SW, read the V-folder that has most of the 'stuff' you want. Then delete what you don't want. Then read any other V-Scanners that mayhave info you want and copy that to the file you're building. Save it with a new name (Local, for example), then write that to the main working memory and back it up to a V-Scanner position (such as one you won't ever want to use) - erasing what is currently in that V-scanner.

Your scanner is operating as it should - when you load new programming, any current programming is lost.

V-Scanners were not meant to be the sole means of programming the scanner.

107. RE: [PRO-197] Basic Set-up Help

Yahoo group: PRO-197
Date: 2009-01-17 19:00:58 UTC
From: Wyes Guy
Topic: 104 Message: 107

Thanks, Joe. If I understand what you're saying, I should use 3rd party software, even though Radio Shack said I wouldn't need it for this simple operation? The guy in my local store apparently is good with scanners, knows about software, but was saying that I should be able to just cherry-pick the frequencies already built in the scanner and collect them in my Favorites for scanning. No need for elaborate folder setups for my purposes, and that's why that feature is built in. But, he was at a loss why the instructions on Pg 43 were inconsistent with what the scanner was actually doing. Specifically, the function to select YES when saving an existing frequency to Favorites isn't offered. He thinks that is why the Favorites is always empty when the scanner re-boots. He thinks if the YES step is followed, Favorites fills up unless and until I edited items out, regardless of rebooting. So, we're questioning if the scanner is actually doing what it is supposed to be doing. Unfortunately, he only had this one in stock, so he can't test it against another Pro-197.

108. 197 on Outside Antenna

Yahoo group: PRO-197
Date: 2009-01-17 19:12:42 UTC
From: dataman60435
Topic: 108 Message: 108

I have the 197 on a outside antenna, as Larry mentioned i use the "ATTEN" per each VHF freqy set in the menu of each Object...It took care of the problem on VHF...Im also 22 miles from one of the ILL-Starcom 800mgz towers and i must use on that tower the "ATTEN" to keep a local EDACS CC near by out of the Starcom CC, it works great...The 197 is maybe tooo sensative to overload but it sure does digital to perfection....

He's right and he's wrong.

You can 'cherry pick', from the loaded V-Scanner, the ones you want, but not from multiple V-Scanners.

I recommend SW anytime there are more than 500 channels involved. It saves the fingers and it saves the knobs and buttons on the scanner.

Your Favorites are erased anytime the firmware is reinitialized (such as loading a new V-Scanner).

The V-Scanner is to allow you to:

a) Get running with something quickly.
b) Save multiple configurations of your data - such as different areas.

I have about 15 different regions in mine - all I programmed myself and none of them the 'stock' V-Scanner data.

For software, they are all pretty good. I use ScanControl and Win500, as I like them the best. There is also PSREdit which is very good. The only reason I went with Win500 is because it had a couple features PSREdit didn't that I wanted. PSREdit may have those now. ScanControl just added GRE support recently.

ScanControl costs more money, but also covers 21 scanner models (maybe more) from Uniden and GRE. It also has a DataGrabber feature that can import frequencies/talkgroups from web pages - even RR without a subscription. I would try the demos and see which you prefer.

VHF is 150-170MHz. While monitoring a station press ATT and see if signal is better. IF it goes away then press it again to bring it back.

More than likely you will have to use the global Att on an outside antenna as the "front end" of the radios is very susceptible to overload if you are in anything but a very rural area. I have some minor problems at my location using an indoor antenna.

Once you have all of your favorites saved as you'd like them most of the time. Resave this config back into the Vscanner. If you have to initialize the radio again and reload your config from the Vscanner, your favorites will now be there.

That still won't allow you to pick favorites from two different
V-Scanners and use them at the same time.

It's not that simple. It's like copying data to a hard drive, reformatting it and copying different data, then reformatting it and copying the first data again. You are never going to get both sets of data on the drive without combining them in software.

Every time you load a new V-Scanner, the scanner is going to have to reinitialize. There isn't enough room for both in memory at one time.

My only point was: Once he gets his frequencies, scan groups and
favorites set up in one configuration. Save it back to Vscanner so
it is accessible the way he wants it.

As far as accessing 2 vscanners---I never implied one could do that.

Joe, Once you get your software. You'll begin to see how it all
works. I would personally use Radio Reference and any files you find
in these groups. You will eventually get used to it.

If you need frequencies from 2 different vscanners. It would make
life a lot easier to have the software first. There are groups that
carry the defaut vscanner data in the files section. You could compy
and paste together what you need into one config. Once you get it
the way you want in working memory--also back it up into a vscanner
folder. Intially it's a very evolving process, which makes it pretty
fun.

I agree completely. And as for software, you said exactly what I said in
my first reply to his question.

There is more different than there is the same.

1800 channels vs 800 (including V-Folders 39400 vs 8000)
Dynamic memory vs channels and banks
Many more features (alert light, tons of user settings, Etc.)
Upgradeable firmware
Faster loading of V-Folders (not that the 2096 was too slow)
22 scan lists as opposed to 10 banks.
And much more.

From: Jeff Kettell
Topic: 123 Message: 123

I have been using the PSR 500 software to load up my 197 scanner..
#1 Where on the software do I enter the 800MHz for my MOTO 800 trunk system.???...I ended up putting them in manually.

#2 when programming a frequency ie... 163.4125 do I enter it in as "FM" or "NFM" ?? What is the difference between the to ???

Thank in Advance...Jeff

On the Trunked Object screen, there are 4 buttons across the top of the screen. These are used to modify TSYS objects, where these frequencies are stored. Clicking "New" will create a new TSYS object, and provide space to add the frequencies. Clicking on the Edit button will allow you to modify the settings of an existing TSYS object. You can also duplicate or delete a TSYS object from that area.

>
> #2 when programming a frequency ie... 163.4125 do I enter it in as "FM" or "NFM" ?? What is the difference between the to ???

That really depends on the frequency in use. Some frequencies have moved to narrow band (AKA NFM), others haven't. For the frequency you show in your question, I would guess that NFM would probably work, but FM would probably be ok as well at this point.

Try the Digital Scanner Comparison Chart

Although the Pro-197 Is not yet there... just look at the GRE PSR-600
(same radio on the inside).

http://wiki.radioreference.com/index.php/Digital_Scanner_Comparison_Chart

Highlights that I found on the 197 not on the 2096 would be
360/700 Mhz, LTR, ESK (along with other EDACS formats) I-calls, Radio
ID's, object oriented scanner (no more 10 bank limitation), record
out, upgradable firmware (not just DSP), etc etc

Buy Software. Join Yahoo Group "WIN500" Look at completed files that work. If you can type you can program the scanner. Good Luck.

In Win500 click TSYS tab. In upper grid under Type, click in and use
pull down to select the system type. Then click the System
Frequencies bar and type in the CC's for Motorola or P25. LCN if
system is EDACS or LTR.

Copy the talkgroup Objects to lower grid for this TSYS Object and
select a scanlist for scanning the TSYS with its mapped tg objects.

After this build, click in top grid then Edit menu and select Add new
Item to end or Insert Item for a second TSYS Object. Repeat above to
complete this TSYS.

Frank

From: Henrik Rasmussen
Topic: 132 Message: 132

I just programmed a PRO-197 for one of our deputies. It works fine on the analog talkgroups, but does not decode the digital talkgroups. This is on a 4.1 3600 baud mixed mode analog/digital system (Durham, NC).

I am the system manager, have the talkgroup info in the scanner (used Scan Cat Lite to program).

When the digital talkgroup is transmitting the scanner sounds like a conventional radio intermittently breaking squelch, but no audio.

Any ideas? Anyone else having this problem?

It sounds to me like some of the digital settings in the scanner have
been changed to values that don't work correctly. I'd suggest trying it
with one of the other programming software titles and see if it resolves it.

It would not be the trunking table if the analog tables work but the digital do not.
I would look at the "digital detect timeout" setting. Lowering this helps eliminate some of the scanner stopping on a channel but not allowing audio to pass.
I have had issues with both of my 197's where the digital stopped working. I tried to recreate the situation but could not. Sometimes during a search, I would start hearing a unknown digital user. When I hit the pause button to stay on the frequency, the unencrypted P25 would revert to the digital hash.

140. Red Lock-tite on discone?

Yahoo group: PRO-197
Date: 2009-01-29 17:12:30 UTC
From: grovermaradone420
Topic: 140 Message: 140

Hello to all Pro-197 group members!
I just bought the $72.99 (item # 20-043)discone antenna from Radio Shack for my Pro-197. I want to know if i can use red or blue loc-tite on the radiator rods to make sure they don't come out- will this hinder performance? will the loc-tite cause any problems as far as not being 100% efficient in getting the signal to the Pro-197? Thank You very much!!!

Good to know. I forgot about that option to reset the global settings.
Sounds like the programming software messed up those settings.

142. Discone & Lightning

Yahoo group: PRO-197
Date: 2009-01-29 17:23:25 UTC
From: grovermaradone420
Topic: 142 Message: 142

Hi fellow Pro-197 owners!!!
I still have on top of my roof the old hardware from which I used to mount my old TV antenna-Back in the 70's... the tv antenna is gone, but the mast is still there (about 33 feet tall). I am gonna climb the ladder to mount my Discone Antenna (20-043 RS). I must know if i need to (and how do I) protect it and my house from Lightning- do i need to run some kind of ground wire? Will my antenna attract lightning? any help VERY appreciated!

That's not the first report I've heard of where ScanCat Lite messed up settings. I would stick to one of the proven programs such as Win500 or PSREdit or ScanControl.

Yes, run a ground wire, but that will not protect your house or equipment. For proper grounding, see here: <http://www.polyphaser.com>

And if you want to get into it deeper:
<http://www.polyphaser.com/cms_spol_app/techdocs/Ground%20Systems.pdf>

This is the equipment used at most commercial tower sites where the equipment has to be connected and working 24/7/365.

It's not cheap, but it's cheaper than replacing a digital scanner.

Topic: 143 Message: 146

Unfortunately if you use/need logging and recording, ARC500 will not do it and the PRO version is still not released. My ARC500 demo expired so I cannot evaluate the logging function even if and when it becomes a reality. The WIN500 logging is clunky and needs work but at least I can do unattended logging. (no working hit counter, can't ignore duplicate hits, etc)

Red Lock-tite is a little stronger but either one should work. Since
it is non-metallic, it shouldn't affect the performance of the
antenna. Make sure the antenna is properly grounded for lightning.

If it's non-metallic, that likely means it's non-conductive, and that's not something you want between elements that should be electrically connected to each other.

IMO, Win500 has a distinct advantage over the other three software's in that the TSYS Objects and Talkgroup Objects are always on the same screen view. The other three require clicking to another screen view or using a pulldown to get to and review/edit the info.

It could be you need a better understanding of the scanner. This link has considerable data regarding the scanner.

From: David Kb7uns
Topic: 140 Message: 157

If you use RED you will need heat or a torch to get it apart Blue may be more then enough, try the Green liquid that will wick into the threads, all you have is vibration and my old RS discones never loosened up after I set the lock nuts.

Im not from the area isnt most of Duchess County (other then Beacon Hill) conventional (non trunked)?

Go to import a conventional system.
http://www.radioreference.com/apps/db/?ctid=1838

If your trying to download the NYCOMCO (Ulster, Dutchess, Orange Public Safety) EDACS Networked Standard for BEACON CITY ONLY...

then make sure you use the Mount Beacon site (Site 002) & Beacon City Talkgroups.
http://www.radioreference.com/apps/db/?sid=841
You may have downloaded the other sites.

again Im not from the area so Im just guessing
Hope that helps..

Talkgroups do have an ID. So to listen to Police dispatch, you enter the ID for the Police dispatch talkgroup.

If double click on the Frequencies column is required, you must be
using either ARC500 or ScanControl software.

However, only ARC list the sites alphabetically so Site 009 is first
in the TSYS listing and site 008 is last.

I've imported all 9 sites into 9 scanlist using ARC, PSREdit and
Win500, each import the frequencies correctly.

By Scanlist, they are actually Mapped to TSYS.

Topic: 165 Message: 165

Hello to all Pro-197 owners... i have this trunking scanner only a little figured out compared to the time i spent studing excellent responces from mike, joe, rik, larry & frank...

Are CC's associated with the trunk system and is inside those parameters ?...OR are the CC's associated with and control Talk Groups? or are Control Channels's used for both let's say "limits" and parameters of the trunked system AND specifically the talk groups frequencys? Any help would be VERY appreciated...thanks!!

166. Re: [PRO-197] Almost there...CC associated with...

Yahoo group: PRO-197

Topic: 165 Message: 166

The control channels are entered into the TSYS (Trunked System) objects. Depending on the system type, you may need only the control channels (and possibly alternates), or you may need all of the frequencies.

Motorola and P25 systems should only need the control channels entered. EDACS and LTR systems require all of the frequencies for a site, with those frequencies placed into specific locations (or LCNs, Logical Channel Numbers) in order to work correctly.

Once the TSYS object is set, you can create TGRP (Talkgroup) objects that are linked to the TSYS objects, which control what the scanner will hear on those systems.

A Heap error is typically caused by a TGRP object that is not properly assigned to a TSYS. If you're using software to program the radio, load that configuration into the software.

PSREdit500 will delete TGRP objects that are not assigned like this.

From what I hear, WIN500 has an option to look at these unassigned TGRP objects and assign them to a TSYS.

I don't know how ARC500 handles these.

169. Odd question

Yahoo group: PRO-197
Date: 2009-02-11 02:11:40 UTC
From: Wyes Guy
Topic: 104 Message: 169

Hi all. I have an odd scenario I'll run by you all. I listen to the state police activity in my area and live around 3 different barracks. Barrack A is to my west, and barrack C is to my east, each no more than 30 miles away. I can hear all radio traffic btwn the barrack and the cars for barracks A and C, even when the cars are on the outskirts of their area and very far away from me.

Barack B is in the center of the 2, and where I live, only about 10 miles away. But, I can only hear the barrack radio traffic, except when those cars are VERY close to me. Even the furthest cars in this barrack are definitely closer than the cars from the other barracks.

The frequencies for all are grouped in the same range, I believe. I've tried different lengths on the telescoping antenna, but no dice. Any ideas why this happens and how I can get around it?

Thanks
Karl

It sounds like the system is a conventional / repeater setup. You may have a MOBILE INPUT frequency programmed ahead of the repeater freq. This would cause the scanner to stop on the input rather than the repeater. I would recheck freqs for "B". In this type of system you dont need to program the INPUTS. Let us know what happens. Larry

172. VS Folders

Yahoo group: PRO-197
Date: 2009-02-21 02:23:07 UTC
From: Wyes Guy
Topic: 172 Message: 172

Hi there. Is anyone savvy enough to guide me on how to merge, without the use of software, scan lists 3 and 6 from VS 1 with scan lists 8 and 9 from VS 7, and save them in the available VS 0 folder I have named "My Frequencies"? Certainly there is an easy way to do this simple task, right? I can't figure out how to add items from different VS folders to my VS 0 folder. The items I have saved there are completely erased and overwritten, rather than added to it, each time I attempt this.

Thanks
Karl

Without software, there's no way to do this without re-entering the information in the keypad of the radio.

For general purpose scanning, many people like the Scantenna.

A lot of people like the discone, too, but I've never seen/heard one
that could pick up better than the Scantenna.

Of course, if a single frequency band is your 'target', then there is no
better choice than a quality commercial antenna made for that band.

And if your target is in one direction, a Yagi (aka beam) antenna would
be the best choice.

For mobile the MAXRAD tri-band is #1. The same antenna on a base adaptor is better than "Scantenna" because it has a smaller capture area. Whatever you use for a base antenna may require you use ATT on most VHF signals. The PRO series scanners often overload when tooo much antenna is used. I can forward photos if needed. Whats more important is to convert SO239 to an "F" connector and use RG-6 to cut down loss. Any height is OK up to the point of being stupid. Usually 10' above roof works for most people. Good Luck

Rough rule of thumb, for level terrain, square root of 2h. For 40' los = 8.9 mi. Keep in mind the same applies to what you are listening to, so a transmitter on a 300' tower will los will be approx 24.5 miles.

Hope this helps.

From: Wyes Guy
Topic: 183 Message: 183

I have most of the local fire and PD frequencies up and running. RadioReference is a useful tool, but not complete or accurate. I was just wondering if anyone knew the State Police Barack for Glen Burnie. The one in RadioReference is not accurate [or at least not yielding any signals]. The MTA dispatch is also really animal control. And there is no dispatch for Prince George's County.

Since we're so close to DC, are there any good frequencies for FBI or Secret Service?

Karl,

Mike, a RadioReference Wiki Admin is frequently on RR and also from Glen Burnie. I started a thread prior to Thanksgiving which he offered info for a trip we were planning to Philly up 301. He stated in that thread that all Bks data and other MSP info was indeed correct. Looked for FBI et al for DC...not found.

185. ScanControl Version 7.1.0 Now Available

Yahoo group: PRO-197
Date: 2009-04-11 20:18:47 UTC
From: kend_2
Topic: 185 Message: 185

ScanControl Version 7.1.0, the only scanner Programming and Control / Monitoring software that supports 21 Uniden and GRE radios in one program, is now available.

ScanControl Version 7.1.0 now adds the following features / functionality:

* Control / Monitoring for the GRE PSR-500, GRE PSR-600, Radio Shack PRO-106 and Radio Shack PRO-197
* Intelligent Audio Capture (audio recording) for the GRE PSR-500, GRE PSR-600, Radio Shack PRO-106 and Radio Shack PRO-197
* Full Printing Support for GRE PSR-500, GRE PSR-600, Radio Shack PRO-106 and Radio Shack PRO-197
* Motorola Trunk System Re-banding Support for Uniden models with latest firmware:

* BCT15 w/latest Uniden firmware
* BC246T w/latest Uniden firmware
* BC898T w/latest Uniden Firmware
* BCT8 w/latest Uniden Firmware
* BR330T w/latest Uniden Firmware
* BC296D w/latest Uniden Firmware
* BC796D w/latest Uniden Firmware

Visit our What's New web page http://www.scannersoft.com/whatsnew.htm <http://www.scannersoft.com/whatsnew.htm> for all the details.

Go to www.scannersoft.com <http://www.scannersoft.com/> for more information on ScanControl.

ScanControl: One Program * Multiple Scanners * Made In USA

186. pro -197 APCO signals

Yahoo group: PRO-197
Date: 2009-04-14 16:03:27 UTC
From: izzy_y2k
Topic: 186 Message: 186

I have a pro 197 and live in swansea illinois a small town across the mississippi river from downtown St louis. I have a 800MHz yagi beam antenna for trying to pick up the signals from St Louis City Police. I also have low loss coax and a rotor for the antenna. Seems I get a signal of 4 and flashing 5 and the T tone is flashing when scanning but the audio is garbled most of the time or it stops on a police talk group and there is no audio. I am losing about 75-85 percent of the transmitions. I am supposed to be in range of the transmittions according to radio reference chart. Is there some settings that i should try for better decoding of the data stream? I thought about a scantenna but figure it cant be better than a yagi built for 800MHz.

Thanks
Izzy

From: dataman60435
Topic: 187 Message: 187

You do look like your a little ways from St. Louis on my map, sounds like other 800 signals desensing your signal reception...When i see that same situation here on my 197 in the Chicago area its usually cell tower or other 800 mgz interference....You did not mention how high up on a tower you are ....If your in a attic with the antenna that is bad also..Plus the beam must be rite on the money..Trunking especially in digital is really rough....Try the "ATTEN" but that may make it worse....Some times a simple rubber duck is better than outside antennas??

Izzy,

I monitor the RadioReference Forum for St Louis at times and recall the city/county was having serious problems with the new P25 system.

However, it appears you are only 13 miles to St Louis side of the river so you should be able to scan the system with any external antenna having ability to tune the frequencies. I like the Scantenna.

Setting ATT may help as these scanners will overload easily.

I see two seperate systems operating in St L area. Do you have the same problem with both.?? What is element count/db gain of Yagi.?? What is length of coax.?? Often bad audio is a problem when mobiles dont get a good signal into the repeater. How about the dispatch.?? Is it clear.?? I live under a Mtn with 4 local 800 systems. I use a Yagi pointed at a tower about 40miles away to receive a special City/County operation. I also use an Amp on the yagi. Scanner is 10 Banks of 800 only. The Yagi gets all the overhead stuff anyway and the amp helps the 40mile distance. NOW, the amp is an 800 MHz ONLY amp. Not broadbanded like VHF/UHF/800. It is a GRE 800 MHz CONVERTER. For older scanners without 800. It has an amp built in to be used while converting 800 to 400MHz. The only way you can use this amp is to have nothing else in the scanner but 800. They are on Ebay once in a while. The Scantenna is a poor choice for your needs. MAXRAD makes a 5db gain 23" 1/2wave over 1/2wave over 1/4wave mobile that can be used as a base with the Base Adp Kit. Kit comes with NMO Brass hardware, support and clamps. Connector is both "N" and "F". Email me direct: larryscan@... and I will send you a picture. Every antenna installation is an experment. Murphys law is always in charge. Hope this info helps. Larry

190. Monitor Funtion Acting Up

Yahoo group: PRO-197
Date: 2009-06-26 12:06:04 UTC
From: Wyes Guy
Topic: 190 Message: 190

Good morning all. I am using Win500 on my Pro-197 to monitor 2 scan lists. The first is a local PD, the second is state PD. I watch the activity via Win500, as well as the scanner, and can see the display on both light up when transmissions occur. The weird activity of late is when the state PD activity occurs, the log shows no entry, and there is no associated file to listen to. What makes this weird is that this happens randomly, not all of the time. I sit right in front of the scanner, listen to a transmission, see the activity on the Win500 panel, and everything is fine. Minutes later, another transmission, but nothing is in the Win500 log or is being recorded.

I've tried shutting everything down and restarting everything, PC, and scanner. Any ideas?

Thanks,

KB

193. Really lost now...

Yahoo group: PRO-197
Date: 2009-07-13 19:31:35 UTC
From: Wyes Guy
Topic: 193 Message: 193

Well, now I'm really lost. I have my Pro-197 set up with Win500. I have been using the monitor feature for months with no real problems. A few weeks ago I had a few glitches, but could overlook them. Now I encounter behavior I can't explain. While using the monitor feature, I can see Win500 showing activity in the log history portion of its program. But, when I open the folder for the day's activities, to listen to the audio files, there are no audio files listed. There is a folder with the correct date established, and a single text file called 'Win500ActivityLog.txt", which is created upon the first transmission activity. That alone confirms there is a USB connection btwn the scanner and the computer. No changes whatsoever have been made to anything in the loop. I tried re-booting both scanner and PC, but nothing. Any ideas why there are no longer any audio files being recorded?

Thanks
Karl

Hi Karl,

I have noticed that, on occasion, my 197 will pause on a talkgroup and move on without audio being heard. In the monitor function, it will log a hit on that frequency even though there was no verbal exchange. I have not personally tried to record the audio stream so I lack experience there but maybe that is what is happening to you. The scanner is pausing on a frequency just long enough to count it as a hit but moves on before any audio is captured.

Hi Fred. I've noticed the same at times. I suppose we are getting the tail end of a short transmission during the scan's cycle. But when the monitor function is on all day, absolutely no traffic is recorded, even though the day's folder and .txt is established on the first transmission. Absolutely weird.

I read it somewhere on RadioReference.com that you have to mark each TGRP you wish to record individually.

Haven't tried to do any of that just yet, may start just to see how it all works.

199. antennae

Yahoo group: PRO-197
Date: 2009-08-03 15:57:23 UTC
From: brwellwood
Topic: 199 Message: 199

Hi, I have a Radio Shack 20-176 mounted in my ground floor bedroom next to the window. I can pick up three Digital/800 towers very well, 2 more fairly well, and one from time to time. I can also get the adjacent county's EDACS pretty well too. How much of a difference would it make to mount the antennae outside on my eaves, still ground floor? If I were an acrobat, I'd find a way to mount it on the roof of my second story house. Thanks in advance for any help.

Brian Wellwood, Sunfield, Michigan

From: Larry Williams
Topic: 199 Message: 200

The 20-176 antenna is bottom end as for as antennas go. It is not tuned to 800 and uses a PL connector which is rated only to 600 MHz. This statement is not intended to offend you, but once you study other antennas you will see the difference. The antenna most likely has RG-58 for a coax feed. RG-6 is the popular choice. Look at the MAXRAD SCAN1000 with the BASE adp kit. Look at a good discone with a broadband vertical element, not a flat top. Some people use the Scantenna. One important factor: GRE scanners are bad to overload in the VHF range. Using a large antenna requires you check each and every of the VHF channels with the ATT for overload. My installation of SEVERAL antennas are ALL feed with RG-6. No PL's or solder connectors. Get other idea from forum members. I can forward some photos if you request directly to larrscan@....

I appreciate the input on the antennas and what might be better than the one I have. How much differece do you notice between the antennae that is outside and the ones in your attic? I don't have the capability of a tower in town, but could put it up on the roof.

From: Larry Williams
Topic: 204 Message: 206

I would not attempt to build a program from scratch. Go to www.radioreference.com and go to their Calif Forum. Post there for someone in your area with a PRO-106/197 to help you with a custom PRM or CLONE. Even if you have to pay for it, Its worth $39 of anybodys $. THEN, backload the program into WIN500 or some other software package. NOW, you can see whats PGM'ed and will figure out what you need to do to finish it the way you want. Join the WIN500 Yahoo group. Go to a sample PGM in the Files section named Upstate SC. Thats one I posted. It's not the info you need but you can really learn things simply by looking at all the things needed to make a program work. You simply cannot look into the display window and see whats in this GRE197 Monster. You need a software package. I write PGM's for this radio every day. For my area I have 8 basic PGM's of 21 banks each and not less than 700 objects each. I wish you good luck with your 197. I can forward some additional data if you email me direct: larryscan@...

Subject: [PRO-197] HELP Programming

Newbie here, just purchased a pro-197, and also radio shack programming cable and Win 96. I am attempting to program San Diego City Police and San Diego County of (RCS- Public Safety), but dumb me don't know the step to do this. Can anyone help me out with the steps to program the frequencys please.

Thanks ahead of time.

Win96 will definitely not work for the Pro-197.

For the Pro-197 the three programs that have been around pretty much
since release of the PSR-500 (compatible with the Pro-197) are:

WIN500 from Starrsoft
ARC500 from Butel
PSREdit500 from me.

All of these provide free trial periods.

I know there are a couple others that have entered the market as well,
but I'm not familiar enough with those.
Mike

Bob M wrote:
> Hi, first-off I don't think WIN96 can be used for a Pro-197. I suggest WIN500, but Butel has a good product too. Both have free trial versions online.

If you need KSP freq go to radioreference they have a good list, try going to a empty channel press pgm then enter freq then press enter, and so forth, i do not even put in tone and hear ksp., nice to computer program though. not the best one for help here but see if this works till a better expert can help Mch is a good advisor.

210. RS197-Programming

Yahoo group: PRO-197
Date: 2009-08-22 19:55:34 UTC
From: dataman60435
Topic: 210 Message: 210

Programming the 197 is very detailed and consists of many steps, its almost impossible to explain on posting...The 197 comes with a decent manual and a "starter sheet' that tells you the steps for conv- and trunking.....Not trying to be a "smart alek but like myself i just took it one step at atime and it now comes very easy.....

If you have not done it already, I would suggest you download the GRE PSR-600 manual. It is much better than the RS manual and covers more topics. Read and study it and you should be able to program your scanner.

You say you have a computer without a CD drive so "using a computer to do it wont work." I do not understand that statement You can download Win500 (free for 30 days) and with a USB cable you can use the computer to program the scanner. Freq's can be obtained from RAdioRef located on the web. A CD drive is not needed.

You can also download the drivers from Radio Shack's web site. The drivers for using the cable with the Pro-197 are also available on the web at http://www.ftdichip.com/Drivers/CDM/CDM%202.04.16.exe and are required for using the cable with the Pro-197.

There are several things you need to do. Tell us where you are. Tell us the system you are trying to monitor. Join Yahoo Groups: WIN500. Look at some of the sample FILES. Use the State Forums section in www.radioreferencelcom to locate a person near you who may already have a good workable program. See if you can get a custom program or clone. The 197 is a monster and it takes a B1G gun to master this radio. Good Luck.

Thank you. I'm located in San Diego, CA I have the frequencies I would like to program. Such as San Diego City, San Diego (RCS) Trunk South and North which appears to be (Splinter).
I'm also using Win500, that program is very confusing. I have joined Yahoo group's Win500, pro-197 and etc.

Now once program the first set of control channel on scan list 00. Then I attempt to program san diego city on scan list 01 and it does not work. What am I doing wrong.

Thanks

to all of you.

Sounds like the data is split between 0 and 1. Look at sample program in Yahoo WIN500 FILES named Upstate SC. That program is very basic. Much like a 96 program. Maybe by looking at it you would see some detail that reminds you of what you need to enter for your program.

Brent,

Scanlist 00 is unassigned. Use the pull down and set Scanlist 02 since you already have 01 for the city.

Make sure you have the TSYS selected in Win500 for the splinter system (county ?), then click the Trunking Tables button then use Standard band plans pull down to select 800MHz Splinter. Bingo, watch the tables populate.

This is the same problem/question that you spoke about in the Win500 group. Did you not see and/or understand my reply? You need to unzip (decompress)the file to install it. Winzip is not a starrsoft file and based upon your statement in the other group it appears that your free trail time has expired. Either buy the winzip program or find another program to "unzip" the file.

If you do not have the winzip pgm, then go download it. It has a free time period. Use it to install win500.

Subject: [PRO-197] Re: New computer- having trouble with pro-197 Win500

This is the same problem/question that you spoke about in the Win500 group. Did you not see and/or understand my reply? You need to unzip (decompress)the file to install it. Winzip is not a starrsoft file and based upon your statement in the other group it appears that your free trail time has expired. Either buy the winzip program or find another program to "unzip" the file.

From: Dave
Topic: 227 Message: 228

My suggestion would be to just unzip it to a folder, then start the program and see if it works. It is either going to work or not. Your biggest problem might be whether or not the USB adaptor for programming is going to work as these will probably need an upgraded driver. Hardware issues are usually more problems then software when switching operating systems.

Dave M.

Do you have the latest version of you download software?

If you are trying to download from Radioreference.com, they changed their website about 6 months ago to a more flexible protocol and the old software no longer works.

Download and install the latest version of your programming software and give it another shot.

I wanted to let people know that I am selling my Pro-197 on Radio Reference and have posted photos there. I just dropped the price to $350 (plus $10 shipping). I purchased it last Sept. and it works great and comes with original packaging and everything that came with it. I am selling because I prefer my Uniden 996T and don't need 2 desktop digital radios. It is in excellent condition and has been in a smoke-free home. Please send me an email if interested. Thanks!

Yes to both questions, however don't use the short 3" adapter cable that
comes with the Radio Shack USB cable when programming these scanners.

From: G.Blum
Topic: 248 Message: 248

Good Afternoon,
Ok I did some reading on objects. No under my thinking a object can be something as simple as a single frequency to a whole multi-site trunked radio system. If that is the case then I can actually take a whole (4 site) trunked radio system downloaded from radioreference.com (i am a paid member)using WIN500 or ARC500 PRO into a object?
I would like to be able to monitor a 4 site trunked radio system that I pretty much sit in the middle of and trunk the whole thing. Every trunk group is the same Id's. If that is not the case, how can I di this?

Thanks and help is always appreciated,

Glenn

An object is any receivable conventional frequency or trunking ID. Join WIN500 Yahoo Group and look at some sample programs in the files section. Mine is Upstate South Carolina. Of course the data is not the same as yours BUT you can see how each object is suppose to look. Mine is all Motorola Type l and type ll and lots of conventional. It's fairly simple except setting up the trunking. Freqs dont go in with the regular stuff. It's seperate. I sold my BC Digital and would not ever get rid of my 197 and 106. Good Luck. Larry

Just bought the pro-197 and the cable, no problems as long as you IGNORE the pathetic sheet of antiquated instructions w/the cable. At least for Windows 7 64-bit (and most likely the other windows versions), LET WINDOWS DOWNLOAD THE DRIVERS, do not get them off the disk. The drivers on the disk are 3 years old, according to windows the automated driver download is 6 months old. I plugged the cable into the computer, allowed windows to do its thing, installed my favorite programming software, plugged the scanner into the computer, and was able to program and control the scanner without any difficulty.

From: scheiner_boch
Topic: 199 Message: 255

I guess it all depends on what your house is built out of. But lets look at this another way, if you mount it on one side of the dwelling, you'll put more material between your antenna and signals coming from the other side of the house. Keep in mind that the signals you're monitoring at line of sight, and that height is the most important variable in receiving far-away signals. I have your antenna, and have no interest in erecting a discone antenna on my roof and having my neighbors shake their heads as they pass by. Parking my radio on the second floor of my house, I gain 15' in elevation, allowing me to monitor towers 10-20 miles away. My suggestion (if possible) if you're really desperate to get further signals is to put an antenna in the attic, and drop cable through a small hole you can drill in the ceiling. a nickel's worth of plaster is all you need when you move out to cover a 1/4" hole. Don't believe too much of the hype about other antennas. Remember, "you won't get by if it ain't high" anyways.

>
> Hi, I have a Radio Shack 20-176 mounted in my ground floor bedroom next to the window. I can pick up three Digital/800 towers very well, 2 more fairly well, and one from time to time. I can also get the adjacent county's EDACS pretty well too. How much of a difference would it make to mount the antennae outside on my eaves, still ground floor? If I were an acrobat, I'd find a way to mount it on the roof of my second story house. Thanks in advance for any help.

Hello,

I posted a message he other day and it never made it to the group.

The question was, The Radio Shack has two up-dates on their site for the Pro-197.

I have a six month old scanner. How can I tell if I need the up-dates?

Thanks,

joso62

Turn scanner off. Then press 3 during welcome screen on turn on.
Current display should be:
uP App 1.8
DSP App 1.4
DSP Voc 1.0 or 1.1 (depending on age of scanner) Yours is likely 1.1.

If you need to upgrade the first two above they are available at http://www.greamerica.com/support/ Use 16 March 2010. Your DSP Voc will determine which of the two CPU's listed to load.

It is my understanding that you should use the RS updates, not GRE, they are not the same. I have both the 106 & 197 & updated using RS with no problems.

More specifically, they are not compatible. You can only use the RS updates on the RS scanners, and GRE on GRE.

From: restonham
Topic: 264 Message: 264

Bought this new early last year and have barely used it. Never used out of the house. Too much scanner for the ham radio and public safety frequencies I am interested in. Comes with everything that was in the original box (also comes with the original box :-)). In excellent condition and operates as it's supposed to.

$360 shipped USPS Priority Mail in the US.

265. Programming APCO25 systems

Yahoo group: PRO-197
Date: 2010-05-30 03:37:06 UTC
From: dalecabell
Topic: 265 Message: 265

I just picked up a Pro-197 and I have a scanner frequency book that displays the trunking control channel in Bold and list the channels and Talk Groups separately. How do I program the 197? Does the bold frequencies and channels go with the Tsys object and the Talk Groups go with the Talk Groups? Some of the Talk Groups are analog and some are digital.

Radioreference.com does not have the county wide trunking system for Orange County CA. I am using the ARC500 programming software.

Thanks,

Dale Cabell

Only the Controller is needed. Some systems have an Alt controller. The 197 receives analog or digital with the controller. Good Luck.

Dale,

You need to set up Trunk systems and put the Frequencies in the frequency spot under the system that you set up. The talk groups will be put under the talk group heading under scannable objects, and you need to designate which system the talk groups belong to. I would also recommend a premium subscription to Radioreference.com and just import your systems and talk groups via the internet into the programming software.

I hope this helps

Michael

Yes, Control Channels - both Primary and Alternate. They go in the TSYS area.

Talkgroups IDs go in the Talkgroup area.

And it will continue to work fine until one of the primary control channels goes down. Then, those who have the alternates will continue to hear it and you won't.

At bottom of RR database page http://www.radioreference.com/apps/db/?sid=201

In ARC500 Trunk System grid, double click the TSYS under Frequenciesa column to enter frequencies in popup.

Dale,

I uploaded 2 pics under my profile I hope that it will give you an idea of what we are talking about. Let me know if you cant view them and I will email them to you directly.

Michael

278. scanner for sale

Yahoo group: PRO-197
Date: 2010-06-03 20:30:23 UTC
From: Brian Verhalen
Topic: 278 Message: 278

I am selling my Pro 2096 base/mobile scanner (bought the 106 & 197),
& will be listing it on eBay within the next week or so. I am listing
it here first to see if there is any interest.
I sold my 96 recently (it went to Toronto, Canada), shipping to
Canada is not a problem.
If interested or need further info, please contact me off list.

It is in very good condition with latest updates from RS
package includes:
scanner
manual
antenna
mounting bracket & all screws/washers/knobs
DIN sleeve & keys

PayPal accepted for payment

Brian KJ6EAC

Subject: RE: [PRO-197] Re: Programming APCO25 systems

Thanks for sending the file. Turns out however it was for Seattle WA. I was able to use it as an example and program the Orange County Trunk System into my Pro-197. I only have some of the talk groups entered as there are many. I will keep working on it. When I am done I will upload it to the group.

Question: How do you lockout by scan list? I have not figured out what scan lists are used for.

Anyway thanks for all your help.

282. I'll duck!

Yahoo group: PRO-197
Date: 2010-06-04 18:44:34 UTC
From: mooselookme
Topic: 282 Message: 282

My new 197 is on the way from R.S. with the USB cable. I will put at a remote tower site and connect to a PC and have a static IP address. I've searched the posts here, but did not come up with a hard suggestion/concenses of what to use for programming/remote control software.

Sorry if I'm redundant, but I'll duck and take the critism is need be.

THANKS!
Dave in Maine

Hello all, just joined, glad to be here.
Just bought a Pro-197 Monday, and as usual, having trouble finding and programming things.
I live in Louisville, KY, is there any way you could send the KY file to me,I would appreciate any help.
Thank you,
Rob

285. PRO-197 Sale

Yahoo group: PRO-197
Date: 2010-06-08 20:07:54 UTC
From: wxford5
Topic: 285 Message: 285

Has anyone noticed that RS is having a sale on the PRO-197 thru 6/19? List price is $400 and the sale price is now $350. Plus, they knocked off an additional $45 for purchases over $xxxx. What's going on? Is there a new model in the works; is RS being sold to Best Buy; why the heavily-discounted scanner???

Ask them to refund you the difference. They have done this in the past when someone paid full price before a sale began.

Wonder if a new model? Uniden is introducing a new one at an open house in Dallas 6/26/10. Wonder if RS is about to also or GRE. Uniden promises to take care of the 800 digital simulcast problem.Last December GRE said one not even on the board for that problem. Montgomery County is prime example.

In a message dated 6/11/2010 10:21:33 P.M. Central Daylight Time, damjerm@... writes:

Heck yea, took receipt in to local RS and they gave me 54.25 back off my pro197 purchase

thanks guys

:)

293. audio from 197

Yahoo group: PRO-197
Date: 2010-06-12 16:48:14 UTC
From: mooselookme
Topic: 293 Message: 293

Hi all,
Any ideas on how I can improve the audio quality through a PC running Windows7? Using a R.S. cable from the front speaker jack to the PC mic input and then connecting a speaker to the PC spkr jack, the audio sounds muffled. I'm using the virtual control feature of ARC500, RealVNC, and want to get the audio to float down the realvnc pipe?
Thanks!
Dave

294. Possible problem w/PRO-197

Yahoo group: PRO-197
Date: 2010-06-13 15:33:33 UTC
From: wxford5
Topic: 294 Message: 294

Recent purchased PRO-197, bought the USB cable, and downloaded WIN500. Everything seems to be working as expected EXCEPT the talkgroup stuff. I've gone thru both the RS and GRE owner manuals and came up empty.

The problem is that the PRO doesn't seem to detect any TGrp entered either manually or via program software, and I'm puzzled. I don't have a working .p500 file for the StarCom21 stuff in my area, so I don't know if it's a bug in the firmware or the frequency information that I'm entering is incorrect. I've don't some .p500 files for other areas and reviewed their P25 definitions, and they appear to be configured the same as mine. The scanner will decode these same StarCom21 (p25) frequencies if I scan for them or enter them as CONV. I can tell that the scanner is detecting the control channel information, but not detecting any of the talkgroup either specifically defined or as wildcard.

Any thoughts, suggestions, or links to similar problems would be much appreciated.

I'll answer my own question LOL !

Never believe anything you retrieve from the web -- I picked up a wrong/old StarCom21 listing. All the control channel stuff was incorrect. Once I discovered my error (by trial-and-error and scanning for the control frequencies) and re-programmed in the correct information, the PRO-197 was a breeze to set-up.

GRrr -- Operator error...

There still could be old files around
with data from more than a year ago.

If anyone has uploaded any such files, please update them.

From: sadatoni
Topic: 299 Message: 299

It's been, oh, 16 years since I've done any scanning. Picked up a PRO-197 over the weekend. There are a few things on the display that I cannot find a reference to, all on line three while scanning. I'm guessing at what they are:

VC - Voice channel? (e.g., VC 857.437500)
CCnn - Control channel? (e.g., CC04)
DG - Digital voice?

There may be others, but that's all that's popping up right now as I type this.

I am indeed. Currently demoing ARC500 and WIN500. I tried another one as well, but it kept saying I didn't have enough free memory! 6 gigs isn't enough? So I deleted it. I'm leaning towards WIN500. I just wish it had a print option (if it does, I haven't found it).

If you join WIN500 Yahoo Groups you can look in the Files Folder at other programs. Mine is Upstate South Carolina. The data is no use to you but when you see how things are set up it just comes to you. Really quite simple. Good Luck.

I have Win500 and the only thing missing, as far as I am concerned, also is a print option. There is no telling what that would entail for the author to add that function so I am content with it as it is.

I am going to play around with the export function and see if there is a way to take a CSV file and send it to a printer where it will format properly.

But otherwise, Win500 does what I want it to do.

The shear number of objects that may be in the list, a printed list could take many pages. That's why I haven't added it to PSREdit500.

With the potential to have up to 1852 objects in a single scanlist, if you could fit 80 lines to a page (and that would be very small print) it would take 23 full pages to print that list...

Try downloading the newer driver from here:

http://www.ftdichip.com/Drivers/CDM/CDM20600.exe

Install that driver and then try again. Make sure that when you install that driver, that the cable is not plugged into your computer. Once the driver is installed, plug the cable back in, and it should load the new driver for you.

Then give it another try.

Also, do not use the short 3" cable adapter that comes with that cable.
It will not work if it's on there.

From: rdaniel757@att.net
Topic: 313 Message: 313

I am using the 20-047 radioshack cable with new win7 drivers from GRE, & successfully installed CPU Firmware Upgrade to ver.1.8 but the DSP Upgrade to 1.4 fails repeatedly, so I still have ver. 1.3. When I get to the TEST button on the install it says the scanner returned incorrect information and to start over, which I have done many times with the same results every time. Does anyone know what the 1.4 upgrade does? What functionality will I lose if I don't upgrade to 1.4?

Maybe some one can explain this better than me but, my GRE500 is one of the first models that were released so the "LAST" #, on the DSP-CPU are 1.0, now some later models are i think 1.1....Now you must use the CPU-Updater for your model, mine was i think "BOOT-F10, yours may be "BOOT-F11, thats why your getting that same info when you try updating the new 1.4....I hope i explained it OK...Try both updaters....

When I did the upgrade, I had to download the instructions from Radio Shack before it would work. There is a slight difference between the DSP firmware procedure and the CPU firmware procedure.

Did you try that?

If you mean pressing different keys to get to the installation menu, yes I did that. On the menu when I hit the TEST button instead of confirming the link between the radio and the computer and flagging me on to the install, it says the radio returned incorrect information and aborts. What instructions did you download from Radio Shack? I only see the update zips on the support page. -Ralph

I used the DSP update zip from the RS support site, (2000106_0197_DSPV14 and 232 kb in size) it seems to start off alright, I get the connection but then it doesn't install, says the radio returned incorrect information and aborts. -Ralph

If you mean pressing different keys to get to the installation menu, yes I did that. On the menu when I hit the TEST button instead of confirming the link between the radio and the computer and flagging me on to the install, it says the radio returned incorrect information and aborts. What instructions did you download from Radio Shack? I only see the update zips on the support page. -Ralph

Dale, According to the RadioReference Wiki the DSP U1.4 fix "minimizes the possibility of a previous NAC displayed on a new transmission" not sure what that means though. -Ralph

It means if you have a transmission using a different NAC, or none at all, it will not continue to display the one decoded from the last transmission.

321. Success! DSP update took

Yahoo group: PRO-197
Date: 2010-08-13 17:59:27 UTC
From: rdaniel757@att.net
Topic: 321 Message: 321

It's been a week and nothing has changed that I know of, but after carefully following the directions, the 1.4 upgrade took this time. The only thing different is that when I pressed the test button this time I got a chime from the radio instead of the error message as before. After that everything went smoothly just like the CPU upgrade. -Ralph

322. Serial Port Default Settings - NOTE: LINUX

Yahoo group: PRO-197
Date: 2010-08-18 13:02:34 UTC
From: wpascanner
Topic: 322 Message: 322

I am trying to determine what the DEFAULT settings for the PC/IF-Serial port on the Pro-197 is for use with the RS USB cable.

Please not I use Linux and only Linux.

I need to know baud rate, bits, parity, stop bits ie:

9600,8,N,1

Or what ever the defaults are so I can put these into the setup for the hardware and terminal program, minicom.

I've looked in manuals, etc.. none give a default setting.

Thanks!

I've never had a receiver any better than the 197. It's "Better" right out of the box. If you define performance as turning on the lights and sound effects then I dont see the need to do anything. The secret to Receive Performance is the correct antenna. I use a 5094-A Channel Master. I can hear a frog fart in Fargo. Good Luck with your 197.

I assume you are talking about switching Banks. If so, press the Bank # 1 to 10 or FUNC 1 to 10 for Banks 11 thru 20. I still call them Banks and list them as such. I have 21 Banks programmed in both my 106 and 197.

press scan and then the scan list number (1-9) .for scan list 10-20 press scan then func then numbers 0-9 depending on if you want scan list 10, 11 and so forth. You remove the scan list from scanning memory the same way.

hope that helps. manual isn't the best so if I were you I would go to http://marksscanners.com/106_197/106_197.shtml. A lot easier to read and understand as the name implies. Unlike my old 2026 scanner, this one is not as intuitive at least not for me.

If you are talking about loading a list from virtual memory, first press 'func' then 'prog' to access the virtual folders. 'stor' your current list in a blank space and name it so as to remember what it is. Press 'cancl' to get back to the main menu for v folders.

Pressing 'load' then brings up a list of the v folders to select from using the up and down arrows. When you have the folder you want to load, press the button under 'load' and then confirm to overwrite the memory. When it finishes, just press the 'scan' button and it will reboot and start scanning the new list.

334. Why is my audio muted on some TGIDs?

Yahoo group: PRO-197
Date: 2010-10-28 02:12:04 UTC
From: jjn5
Topic: 334 Message: 334

I'm a brand new owner of this radio to replace my PRO-2055 Trunking Scanner. I am having a weird problem with the Milwaukee County TRS (newly rebanded) and I'm running out of ideas to try.

When the radio stops on a TGID that I have in my scanlist, the audio is completely muted if the third line on the display is showing the Group ID. If it's showing the voice frequency (alternating with the system frequency at that moment) on the third line, then I ALWAYS get audio just fine.

The weird thing is that I've seen an exchange between a dispatcher and a squad start out fine (VC is on the display), but then when one unkeys, the 3rd lines shows the TGID (proper number, by the way) and the audio goes silent.

I'm using Starrsoft WIN500 to upload my data into the scanner. I have all 20 frequencies listed on the RR site (not JUST the control freqs) programmed into the "System Frequencies". I suspect it might be a fleet map thing, but I'm not sure. I didn't have this problem with my PRO-2055.

HELP!

Did you try this?

Open your file with the Milwaukee System

Win500

1. Set 'Trunking Tables' to 'Custom'
2. Click 'Trunking Tables' button
3. Select 'Rebanded' under band plans

Dave,

I think you nailed it! Thank you VERY, VERY much. The key thing I was missing was that although I DID select the rebanded 800 mHz table in the selections that appear when you click on the Trunking Tables BUTTON, I DID NOT select the 'custom' option in the 'Trunking Tables' DROPDOWN list. Two things on the main screen with the same name was obviously confusing me. I'm still learning how this radio, the new TSYS and the Win500 software all works together.

So far, I've had my eyes glued to the display and only caught ONE 'hiccup' as I described below in about 15 minutes of listening. That's a FANTASTIC improvement in what I had been seeing. Thank you very much. If you're ever in Milwaukee, I'll buy you a beer (or three)! I wasn't sure earlier tonight, but after I did what you said, I'm sure I'll be keeping this radio. It's pretty cool, even compared to my former cool PRO-2055.

Thanks again. I'll make sure to write this little tidbit in my owners manual for future reference. Good job, Dave.

The key thing I was missing was that although I DID select the rebanded 800 mHz table in the selections that appear when you click on the Trunking Tables BUTTON, I DID NOT select the 'custom' option in the 'Trunking Tables' DROPDOWN list. Two things on the main screen with the same name was obviously confusing me. I'm still learning how this radio, the new TSYS and the Win500 software all works together.
>
> So far, I've had my eyes glued to the display and only caught ONE 'hiccup' as I described below in about 15 minutes of listening. That's a FANTASTIC improvement in what I had been seeing. Thank you very much. If you're ever in Milwaukee, I'll buy you a beer (or three)! I wasn't sure earlier tonight, but after I did what you said, I'm sure I'll be keeping this radio. It's pretty cool, even compared to my former cool PRO-2055.

338. Indiana StateWide System

Yahoo group: PRO-197
Date: 2010-11-07 22:23:57 UTC
From: bobby2656
Topic: 338 Message: 338

Is this a P25 system? I seen a picture of a Pro-197 running Indiana STATE System as one. I only live 5 miles from a tower, so reception is not a problem. The scanner DOES work on Motorola 800/900 Trunking in Butel ARC500. Anyhow was just wondering, if I was seeing wrong or DOING something wrong?

I have the Pro-197 and use the Butel ARC500 software. I'm located in Indianapolis and yes the system uses the P25 system. I pick up the MECA System and Statewide System. Hope this helps you out!

The Indiana Statewide System is a Motorola 800/900 system using P25 Digital voice. The system type is dependent on the control channel type, not the voice type.

A system using a P25 9600 bps control channel would be a P25 Auto or Manual system.

Indiana "Safe-T" system is an APCO 25 digital system. Look up the control freq's for your tower at Radioreference.com then simply add the groups you want to listen to. i.e. ISP area 52 (indianapolis), ISP area 14 (lafayette), DNR, etc...

actually SAFE-T is not a true APCO 25 system as it uses a 3600 baud
control channel and does have some analog TG's

I haven't seen that problem with my PRO-197, but I think I have the answer. Check the firmware version of your radio. If the CPU (not the DSP) version is less than 1.8, you probably need to upgrade. Here's what I found on the GRE site regarding your problem:

http://www.greamerica.com/support/index.php?_m=downloads&_a=viewdownload&downloaditemid=1016

Good luck. Let us know if that's the cause.

What version of CPU (not DSP) firmware do you have installed in your radio? The GRE website says that CPU version 1.8 fixes that 'mirror image' problem that you're probably having.

From: jjn5
Topic: 348 Message: 348

As you all know, the PRO-197 has the ability to 'tag' each TGID as PRIVATE or GROUP. I cannot find any clear (to my brain) definition on just what the difference is, and more importantly, how the radio would act differently if I set any particular TGID to PRIVATE from its default of GROUP.

349. Re: [PRO-197] What is a PRIVATE message?

Groups are like regular talkgroups.

Private means it's a radio ID and not a talkgroup.

99% of the people will have everything set for Group.

From: jclemmer82190
Topic: 350 Message: 350

I will have my 197 in 6 more days. Can't wait!!! Already have the software with the local frequencies within 100 miles set up. My question is, with it being new right out of the box, when I upload the software, will it check for the latest firmware? I noticed from looking at it first hand at the shack, The DC cord does not have a cigarette lighter plug on it. does this require a specific kind, 2.5 amp, 5 amp, 10 amp, regulated and so on. Any suggestions are welcomed.
My thoughts are a regulated one.

To find out what CPU (not DSP) version you have, do this:

1) Turn the radio off.
2) Press AND HOLD the PGM button.
3) Turn the radio on.

The 2nd from the top line will give you your CPU version. Mine says:
uP App Ver:RV1.8

The version 1.8 firmware for the PRO-97 can be found here:
http://www.greamerica.com/support/index.php?_m=downloads&_a=view&parentcategoryid=22&pcid=11&nav=0,7,11

Just follow the instructions, BUT MAKE SURE YOU DO NOT LOSE POWER WHILE THE UPGRADING PROCESS IS TAKING PLACE!

Let us know if that cured your problem.

Well, nobody told me that you couldn't do that. Where did you see that you couldn't do it?

I downloaded BOTH the 1.4 DSP and the 1.8 CPU firmware from the GRE website and updated my Radio Shack Pro-97 scanner with it. It works for me just fine. I did it within the past few weeks.

You can not use the GRE Firmware upgrades on a Radio Shack Scanner. Gre did provide RS upgrades that were available on the Radio Shack support page. Last time I searched for them I could not find them.

The upgrade process will tell you what version you PRESENTLY have installed in your radio AND what version you're TRYING to install. If they're the same, you don't need to do anything.

While you're at it, you will probably want to install the latest DSP code as well. Here's where you can find that:

http://www.greamerica.com/support/index.php?_m=downloads&_a=viewdownload&downloaditemid=1018&nav=0,7,11

There's actually a better way to find out what firmware versions (both CPU and DSP) you have in your radio. Turn it off, then turn it on and QUICKLY press the '3' button. The latest DSP version is 1.4 so verify that your radio has it and if not, you can get it from the link above.

Yahoo group: PRO-197
Date: 2010-11-26 23:41:33 UTC
From: jjn5
Topic: 351 Message: 360

Well, I did it. My PRO-197 had version 1.7 and 1.3 of the CPU and DSP firmware respectively. I updated it to 1.8 and 1.4 from the GRE link I published below. It worked just fine for me. It's been working fine for over a month (knock on wood) since I bought it.

Just for kicks, I looked at the files at the RS link that Dave provided and compared them to the same version at the GRE website. I was hoping to find a single EXE file where I could do a CRC comparison of the two files, but the RS site's files are different. That's NOT at all to say that it won't work, but I was hoping to do an apples-to-apples comparison to prove that the CRC of each was the same. Unfortunately, I cannot do that, so there's no way for me to prove 100% that the GRE files can be used on a RS radio other than to say, "Trust me, I've done it on my PRO-197.".

By the way, I picked up a PRO-106 today at the local RS store and it came with the latest version of firmware already installed (CPU 1.8 and DSP 1.4), so there was no need for me to update my firmware.

Glad to hear it. Just for my info, did your radio have an older version of CPU firmware (probably the culprit) and/or DSP firmware (probably not the culprit) installed in it when you were having the 'mirrored display'?

Topic: 362 Message: 362

Hi Group

I've posted this problem on RR a number of times and have had no luck...hoping this group can help. I bought the 197 a couple of years ago and got it working by loading one of the VS folders that are pre-loaded in the radio. It's worked fine until this past August. I turned it off for a week while we were on vacation. When I returned, I turned the rig back on, and it's not receiving digital transmissions anymore. The analog side works fine, but no digital reception. Here's what I've done since the problem started:

1. Reloaded the VS and Scan list numerous times....
2. Did factory reset on radio
3. Checked antenna cabling/connections...all good
4. Made sure all attenuation is off.
5. Noticed that the CCs that are in the VS are different than those on the RR site...so I added the RR CC's into the list.

The area I am trying to scan is Bucks County PA. What's frustrating is that the radio worked fine 24/7 for close to 2 yrs...and now it's useless in the digital mode.

Is there any other troubleshooting I should be doing? A couple of other hints are that the the "T" in the display never comes on while scanning. I did park it on a frequency for a while, and maybe once a day heard something...but that's it.

Or...is the radio just screwed up?

Maybe they went encrypted, or the system has rebanded in which case you would have to change the band plan. You said yourself the frequencies on radio reference were different than those in your scanner, this may cause you to miss alot of radio traffic. If anybody else on the list can look it up for him and give him a definitive answer as to whether they have rebanded or not i would appreciate it as i do not have access to a computer right now I'm responding through my phone. If not ill check it out tomorrow and get back to the OP.

Hope we can help you,
Bob

Also if the frequencies on radio reference are 15 mhz lower than some of the channels in your radio they have definetly rebanded.

You failed to mention software. Having software would allow you to SEE the program and modify any element at once. Even having to reset some elements is very easy and FAST. Good Luck.

Bucks Co is listed on the radioreference database, it is a 5-Site 500mgz analog and digital trunk system...The database page shows you the "Custom Tables" that must be programmed in a GRE/RS or Uniden scanner in order to receive it...It can be done by hand in the "menu' or most likely with software....Sites may need the CC's listed seperatly in one ScanList or seperatly...The CHlo-CHhi etc are as mentioned listed on the database page....

Thanks so much for all the replies!

As far as software is concerned, I haven't used any software to program it in the past. I just pulled up the VS that was already loaded in the rig and used that. Never had to use the customized table info. But, I read somewhere that PSREdit500 is probably the best to use. I DO have the programming cable from RS, but never used it since the VS worked fine.

Where on the RR page is the "Custom Table" info?

Thanks again everyone!!

Go to the "database forum", see the map and click on "PA"then point to your county on the right...Click on it and scroll to "Bucks Co Motorola Trunk system and click on it...Some one printed the tables for both brands of scanners....They can be entered by hand but you need to check with www.marksscanners.com and read the "easy manual for help....

369. SUCCESS with my Pro 197!!!

Yahoo group: PRO-197
Date: 2010-12-06 03:06:00 UTC
From: Chris B
Topic: 369 Message: 369

Thank you all for your help. I realized how much of a dope I was asking where the Custom Table was on RR when it was right there. I opted instead to do it the easy way and program it using PSREdit. Of course, I couldn't find the CD that came with the RS cable, but I was lucky in that the RS site had the software for download. A little noodling with Windows to get it to load, and it worked. Downloaded PSREdit and found I could simply download the RR database for Bucks County. Dropped the $15 with RR to become a Premium Member and literally within 5 minutes, the radio started to work again!!!

I am now a firm believer in PSREdit! As I write this, I am listening to local police calls. I even got the little LED to come on RED. hahahaha.

Thanks again everyone!!

CB

From: wowxxi2002
Topic: 372 Message: 372

I have a two year old GRE PC I/F cable for GRE PSR-600. I am now using Windows 7. What is the procedure to down load the Windows 7 driver from GRE? Is it simply download from GRE and then plug in the USB I/F cable and Windows 7 takes are of everying? Or do I need to do more to download the driver?
I want to avoid screwing up the procedure.

Part 2. In addition to the PSR-600 I also now have Pro 197 and new Pro 106. I assume the GRE-PC I/F USB cable is fully compatable with Pro 197 and Pro 106? Correct?

Part 3. Since I have GRE and RS scanners I assume the fireware is not the same for RS and GRE scanners so I ahve to go to both web sites to download the RS and GRE firmware. Correct?

Many thanks

A couple days ago I ordered the Pro-197 digital scanner. I've been analog scanning for years but so new to digital scanning. I've heard digital scanners are very difficult to program. I was wondering which type of software is the best to use to program the 197? Also where can I find digital frequencies for Kentucky (State Police Post 9). Any help is greatly appreciated.

I use Win500 from starrsoft.com , and you can use radioreference.com for the KY frequencies.

Win500 is what I use. Analog is child's play compared to digital. The premium subscription to Radio Ref makes it easier from what my buddy says. I do not have that yet. will look at that today for my stuff.

John

Suggest you get a subscription to Radio Reference for the frequencies. Win 500 from Starrsoft is the best software. Radio Shack has the needed reference cable (20-546) I just received my 2nd 197 a few days ago. Also have a 106.... Just down the road at Exit 12, WKY PKY...

djg in KY and still learning the programming routine.

378. Battery meter question

Yahoo group: PRO-197
Date: 2010-12-22 17:58:52 UTC
From: jjn5
Topic: 378 Message: 378

Does anybody know what the two numbers mean when the display is showing the battery status? I understand the number to the right is the voltage, but I have no idea what the 3 digit number on the left of the display is supposed to represent. I haven't found any indication of it in the manual, either, so if anybody knows, please edjamate me.

You've come to the right place for Pro 197 help. Three things that will make your life alot easier: 1) Get the programming cable from RS (I forget the part number), 2) Download a copy of PSREdit500 (Google it), 3) Sign up to be a Premium member for Radio Reference.

Connect the cable and install the driver. That might take a few times for it to "take" but it will work. If you use PSREdit500, it's free for 30 days, and not expensive if you decide to keep it for future noodling with the radio. For PSREdit to work easily, there is a pull down to simply download the Radio Reference settings...hence the need for the premium membership.

I did this a couple of weeks ago when my Pro 197 got stupid on me. I had the radio back up and running in 15 minutes doing this.

Good luck!!

What about connecting the Pro 197 to the computer? I am running Windows 7 and probably go with WIN500 software. Do I have to set up USB COM PORTS to download software? Or do we simply turn on the Pro 197, plug in the PC I/F cable to the computer USB port and next plug in the cable to the scanner?
I am not sure of the correct steps to get the download working.
Thanks!

What software program were you using before getting the PSREdit500????
I have Win500 from Starrsoft and the correct cable P/N is 20-546.

I have two 197 radios that are still dumb but I hope to fix that this
weekend. Also have a PRO-106.

First, make sure your USB adapter is working. Install the drivers if they are not already part of Win7.

Next, note the COM port assignment in Windows Device Manager. This will likely be COM5 or so.

You can DL the software at any time from the website and install it and run it. The only thing that needs set in the software is the COM port to match what you found in step 2.

Then, connect the cable to the scanner and try to DL the programming from the scanner.

I just got my scanner today and only used PSREdit500. I want to use Win 500 but I don't know how to open zip files. Winzip software isn't free so I don't know of another program to open zip files.

What software program were you using before getting the PSREdit500????
I have Win500 from Starrsoft and the correct cable P/N is 20-546.

I have two 197 radios that are still dumb but I hope to fix that this weekend. Also have a PRO-106.

Thanks for the advice. I have already downloaded Win500 and paid for it plus I have the premium sub to RR and I have the cable. Now I need some time to learn this thing, actually three things. I also have a PRO-96 that I did a sloppy hand programming of but now have the cable for it too. Your advice seems to be the most credible. Thanks...
Greta, did you see this email as I think it will have a lot of answers for you????

So far the PSREdit program is great. It's free for 30 days. Then only $35.00.

Go to www.radioreference.com and post on your STATE Forum your city/area and request help with programming. Either a close or custom program. With some luck a neighbor my have what you need. Load this into scanner then backload it into software. If you have WIN500 then join WIN500 Yahoo Groups and look at some sample files. OR open those files into your software and study. I know several that did it this way and were pleased with results. From that point you could change-delete-modify whatever you needed. Good Luck.

The antenna might be the problem. Are you using the antenna that came with the radio? If you are try changing the placement of radio to get best reception. Install an outdoor one as high as possible. It still could be the programming or no activity on what you put in or both.

From: Greta Frasure
Topic: 374 Message: 398

I have my scanner up and running. I programmer it via PC. I have 2 digital frequencies (KSP Post 9) that I need to program in manually. These frequencies aren't on Radio Reference. I did program the frequencies in manually but I don't think I did it right. Here is how I done it. Program, new, conv, then entered frequency then done. The friend that gave me these frequencies says they are extremely active but so far I haven't heard the first transmissions on them. Did I program them correctly or do I need to do it differently?

Greta, would you mind telling us what the other frequencies are? Did you also program in the handheld to car frequecies? If KY has other Freqs., I would like to know about them. DMV and Wild Life use some common frequencies with the KSP for enforcement. I listen to KSP Post 1 and 2 mostly...

Merry Christmas All,

I am sure that I am not the only one on here who received a Pro-197 for Christmas, and I can tell from reading some of the posts that many have had a hard time programming it.

I see that most so far have been told to get the RS cable and the software. My question is: Is there a way to program the thing manually without using a PC? If so, I would love someone to talk about it, or even EXPLAIN IT. LOL

Am interested in programming for Lake County, FL.

Peace,

Pastor M.

Read backwards thru the post on this forum and take note about www.radioreference.com The state hospital is currently full of people trying to program a pro197 by hand. Good Luck.

The 2 frequencies are 460.2375 and 460.13175. The friend that gave me these said transmissions are almost non-stop but I have yet to hear the fist thing on them. 453.950 and 460.6625 are what I hear the most on. 453.450 also works for me.

While I haven't looked at the map for your area, You should be able to pick up two or three different post because of the KY repeater systerm.

I use post 1 Mayfield, post 2 Madisonville, and post 16 in Henderson.... Using a 106 or pro-98 allows traffic to be picked up on those repeaters.

The frequencies that you listed sound like car-to-car or trooper-to-car..... and these are VHF non-digital...

Gosh, if you monitor Post 9 Pikeville, that is dang near the opposite end of the state from where I am.

My first thought on this is if you have the PC to help program, I would do it that way first. I have both the 106 & 197, have done some "non trunk" programming manually with no problems (previous scanners PRO 96/2096). Seeing it on the computer screen might help you. I use Win500, but it appears that both are about equally capable.

The state hospital is currently full of people
trying to program a pro197 by hand. Good Luck.

especially TRUNK programming

LOL. Thanks for the advice.

I am listening to some of the county's traffic at the moment, but there are also some signals that sound like they are under water.

I DO plan on getting the software and the cable, just wanted to listen to some stuff today before I can get to RadioShack.

M

The first thing I would do is check to make sure the scan list you assigned the frequencies to is enabled.

It's not that hard. You press the PGM button, then NEW (F1), then the channel type (Conventional, trunk, or search), and continue to follow the prompts.

Topic: 374 Message: 411

My scanner was programmed via PC but the 2 frequencies I want to program isn't available on RR. I programmed the frequencies manally but I'm not sure I did it right. Is it possible to program the scanner via PC with frequencies that aren't listed on RR?

Subject: Re: [PRO-197] PRO-197 Question

My first thought on this is if you have the PC to
help program, I would do it that way first. I
have both the 106 & 197, have done some "non
trunk" programming manually with no problems
(previous scanners PRO 96/2096). Seeing it on the
computer screen might help you. I use Win500, but
it appears that both are about equally capable.

Yes totally in the opposite end of the state. I'm at Harold, near Pikeville. All the freqencies (except the 2 my friend gave me) gave from RR. I thought all those but a couple were digital freq.

Subject: Re: [PRO-197] PRO-197 Question

While I haven't looked at the map for your area, You should be able to pick up two or three different post because of the KY repeater systerm.

I use post 1 Mayfield, post 2 Madisonville, and post 16 in Henderson.... Using a 106 or pro-98 allows traffic to be picked up on those repeaters.

The frequencies that you listed sound like car-to-car or trooper-to-car..... and these are VHF non-digital...

Gosh, if you monitor Post 9 Pikeville, that is dang near the opposite end of the state from where I am.

I, personally, cannot answer your question at the moment until I get to tinkering with the programs some more but it seems to me that the frequencies could be entered manually on the freq. list and then uploaded to the radio..... Can anyone else help us out here...

Yes certainly just add those to the Win500 or such software that your using
and might want to consider submitting those to the RR Database also.

My first thought on this is if you have the PC to
help program, I would do it that way first. I
have both the 106 & 197, have done some "non
trunk" programming manually with no problems
(previous scanners PRO 96/2096). Seeing it on the
computer screen might help you. I use Win500, but
it appears that both are about equally capable.

I agree wholeheartedly. After all, a learning curve is expected when you get any new electronics. But if you spend some time studying the manual (a well written one, I might add), you will have things figured out in no time, and won't be totally dependent on a computer. Then you'll be able to program in a few frequencies on the fly once in awhile.

I don't think it's that hard either although it is time-consuming.

418. Pro 197 programming TV channels?

Yahoo group: PRO-197
Date: 2010-12-26 01:46:27 UTC
From: wowxxi2002
Topic: 418 Message: 418

Has anyone programmed the new digital TV channels in the Pro 197? I would like to listen to the TV audio while in the car. I assume should work? If yes, would anyone have the frequiencies for the TV digital audio?
Thanks

Same procedure. The scanner decodes P25 frequencies automatically.

Trunk systems are a little more complex, but they are still not hard.

Read the scanner with software then upload the file to the FILES section
where others can review it to locate any issues.

421. Re: [PRO-197] Pro 197 programming TV channels?

Yahoo group: PRO-197
Date: 2010-12-26 02:00:50 UTC
From: MCH
Topic: 418 Message: 421

Digital TV is not supported by any scanner made so far.

BTW, the digital TV frequencies are the same as the analog frequencies:
54-72 MHz, 72-88 MHz, 174-216 MHz, and 470-700'ish MHz.

To decode the audio, you would have to decode the entire channel then
extract the audio. It is no longer carried on distinct frequencies.

Joe M.

wowxxi2002 wrote:
> Has anyone programmed the new digital TV channels in the Pro 197? I would like to listen to the TV audio while in the car. I assume should work? If yes, would anyone have the frequiencies for the TV digital audio?

422. Re: [PRO-197] PRO-197 Question

Yahoo group: PRO-197
Date: 2010-12-26 02:02:10 UTC
From: Greta Frasure
Topic: 374 Message: 422

These are the steps I took to program in the 2 frequencies in the scanner. Is this the proper method? PROG, F1, CONV, then scroll to freq. then add freq. then hit done. Analog channels I programmed using this method work great but the 2 digital freq I programmed aren't active.

Read the scanner with software then upload the file to the FILES section
where others can review it to locate any issues.

Yeah, the more heads we can put together for experiences on the 197 and
then post those results in the files section, we can make this one a
leader...

428. Re: PRO-197 Question

Yahoo group: PRO-197
Date: 2010-12-26 02:08:58 UTC
From: kayi4cle
Topic: 374 Message: 428

Here are the same instructions Joe gave, but in a wordier version:
http://forums.radioreference.com/radio-shack-scanners/173890-pro-106-scanner-question.html#post1266194

Hope this helps!

Topic: 374 Message: 431

Non-trunked, just digital is correct. Greta here is another scanner
site for your area of the country...

http://livefeed.ai4uk.com/

Eddie has a pretty good site here that you may be able to get some good
info from.

From: James Richardson
Topic: 374 Message: 433

Kansas State Patrol?

Jim<

From: PRO-197@yahoogroups.com [mailto:PRO-197@yahoogroups.com] On Behalf Of
Greta Frasure
Sent: Saturday, December 25, 2010 7:32 PM
To: PRO-197@yahoogroups.com
Subject: Re: [PRO-197] PRO-197 Question

The guy that gave these frequencies said CONV. As far as I know none of KSP
is trunked is it?

Subject: Re: [PRO-197] PRO-197 Question

These are the steps I took to program in the 2 frequencies in the scanner.
Is this the proper method? PROG, F1, CONV, then scroll to freq. then add
freq. then hit done. Analog channels I programmed using this method work
great but the 2 digital freq I programmed aren't active.

From: DJ Gammon
Topic: 436 Message: 437

460.131750 and 460.23750 are both Dorton/Pike County transmitters according to Radio Reference...
460.23750 is also used in Post 2 at Madisonville / Hopkinsville County
460.131750 is used at Post 1 in Mayfield and the transmitter location is in Paducah.

Both frequencies are of multi-use around the State of Kentucky.

I already had both of these frequencies programmed in my Pro-96 and am pretty sure that I have heard traffic on both of these channels. Here is a list of VHF band channels that you should hear some talk traffic on.

SP Statewide

Frequency License Type Tone Alpha Tag Description Mode Tag
154.66500 KN9873
<http://www.radioreference.com/apps/db/?cs=KN9873> M 186.2 PL KSP

<http://www.radioreference.com/apps/db/?cs=KN9873> M 162.2 PL KY
Statewide Kentucky Statewide, Multiple Agencies FM Multi-Talk

Some of the car-to-car, talk around (chit-chat), and trooper out of the car to the car repeater are also listed in this list. Suggest you program these channels in also... I hear a lot of traffic on the 154.6650 mobile extenders since that is the trooper's link to POST when he/she is out of the car. I hope these frequencies are of help to you.

djg in W. KY at Exit 12 of the WKPKY.

Since changing the mode on the scanner to P25, scan will stop on these frequencies for about 10-15 seconds but no transmissions are heard. Do I need to change more settings?

460.131750 and 460.23750 are both Dorton/Pike County transmitters according to Radio Reference...
460.23750 is also used in Post 2 at Madisonville / Hopkinsville County
460.131750 is used at Post 1 in Mayfield and the transmitter location is in Paducah.

Both frequencies are of multi-use around the State of Kentucky.

I already had both of these frequencies programmed in my Pro-96 and am pretty sure that I have heard traffic on both of these channels. Here is a list of VHF band channels that you should hear some talk traffic on.

SP Statewide

Frequency License Type Tone Alpha Tag Description Mode Tag
154.66500 KN9873
<http://www.radioreference.com/apps/db/?cs=KN9873> M 186.2 PL KSP
F-1 KSP - Mobile Extenders FM Law Talk
153.92000 WNJS469
<http://www.radioreference.com/apps/db/?cs=WNJS469> M 186.2 PL KSP
F-2 KSP - Tactical Operations FM Law Tac
154.92000 WNJS469
<http://www.radioreference.com/apps/db/?cs=WNJS469> RM 162.2 PL KSP
F-3 KSP - Portable Repeater FM Law Talk
154.92000 WNJS469
<http://www.radioreference.com/apps/db/?cs=WNJS469> RMT 289 NAC KSP
F-3 (D) KSP - Command Post Repeater P25 Law Talk

KSP-SRT KSP - Special Response Team P25 Law Tac
460.25000 WQBJ386
<http://www.radioreference.com/apps/db/?cs=WQBJ386> RM 211 NAC

KSP-AirGrnd KSP - Air To Ground P25 Law Talk
155.37000 KSQ718 <http://www.radioreference.com/apps/db/?cs=KSQ718> M
KSP-CH 14 KSP - Tactical - Intercity Mutual Aid FM Interop
453.30000 KN9873
<http://www.radioreference.com/apps/db/?cs=KN9873> M 162.2 PL KY
Statewide Kentucky Statewide, Multiple Agencies FM Multi-Talk

Some of the car-to-car, talk around (chit-chat), and trooper out of the car to the car repeater are also listed in this list. Suggest you program these channels in also... I hear a lot of traffic on the 154.6650 mobile extenders since that is the trooper's link to POST when he/she is out of the car. I hope these frequencies are of help to you.

I don't know the answer to that question. KSP is just digital and is not a P25 trunk system.... Go to RR dot com to the state agency page and read the info there as maybe a tutorial about the system.....

Yeah I now it isn't a trunked system. Someone on RR reference suggested I change it to P25. A friend of mine gave me those 2 frequencies. My friend told me transmissions on the 2 are nearly non-stop but I have yet to hear the first thing on them so I posted a ? about it on RR and somoen suggested I change it to P25 and see what happened. So far still no transmissions. I programmed those manually and I'm thinking I didn't do it right.

It's trying to evaluate them as control channels in that mode, not as voice channels. I believe they are conventional channels, not trunked, so that is why that mode won't work.

According to RR it appears 460.13175 should actually be 460.1375? DO not have an answer for 460.2375. They should be programmed as FM and the scanner will automatically recognize the digital. read this link http://www.radioreference.com/apps/db/?aid=720

According to RR it appears 460.13175 should actually be 460.1375? DO not have an answer for 460.2375. They should be programmed as FM and the scanner will automatically recognize the digital. read this link http://www.radioreference.com/apps/db/?aid=720

> Yeah I now it isn't a trunked system. Someone on RR reference suggested I change it to P25. A friend of mine gave me those 2 frequencies. My friend told me transmissions on the 2 are nearly non-stop but I have yet to hear the first thing on them so I posted a ? about it on RR and somoen suggested I change it to P25 and see what happened. So far still no transmissions. I programmed those manually and I'm thinking I didn't do it right.

From: MCH
Topic: 436 Message: 445

IF the frequency is correct (more on that below), NFM. However, even that is not truly the correct mode if it's a 6.25 kHz channel (NFM is for 11-12.5 kHz channels).

I said IF on the frequency because what someone else just posted may be correct that the frequency is 460.13750, not 460.131750. The 6.25 kHz channels are not assigned by the FCC yet as far as I've heard. I didn't say anything because stranger things have happened - such as having P25 Phase II systems on the air when the Phase II standard isn't even set yet.

Check/confirm the frequency first.

The sq mode is what I had changed to P25. I changed it back to search.

I have just discovered the 2 frequencies I have been talking about are already programmer in my scanner via software. The guy that gave me these said they weren't online but apparently they were already on RR. He did make a mistake on one of the frequencies. I programmed these manually for no reason. However I'm not receiving any transmissions on them but I imagine I will eventually. He said he was hearing transmissions only on those 2 frequencies but I am receiving KSP transmissions on at least 4 frequencies. From now on I'm not going to go by what he says. I'm only going by what the experts here and RR tell me. lol. It will take me a while to learn digital scanning but I'm sure I will fervent hang of it soon. I've already learned alot from the great people here and at RR. Thank you all.

I am glad you are receiving some transmissions now! I'm not surprised to hear about the difference in the gentleman's receiving the same agency that you are trying to receive. It often boils down to physical location and things (buildings, mountains, etc.) that are between one and what one wants to hear. Also, some signals are so weak that if I move my radio a few inches one way or the other I can no longer pick them up. And I can only hear a few systems on one side of the house (versus the other). So, I wouldn't totally discount everything the gentleman has helped you with, just because it doesn't seem to all apply to your location. The good news seems to be that you are beginning to get "up and running" (and learning)!

Yep I am a newbe. running Win500 and RS Pro 106 and Pro 197. All looks great upload from RR to RS scanners worked great. Except I get warning "nothing enabled" I can only listen to one channel at a time. Frequencies seen to be loaded correctly but no scan. Cannot enable scan list.

I also have same problem loading the pre programed folders to memory. Same error.
I do not understand how to enable the scan. I press the number 1,2,3 etc. All they do are flash on and off.
So I am pretty stupid.
thanks for your help

Are the channels locked out? Did you assign the channels to a ScanList? Those are about the only two issues it could be if you are enabling the ScanLists on the scanner and nothing is working.

Maybe you have everything assigned to one ScanList, and you haven't enabled it so far? Try enabling them all (0-9, 10-19) and try enabling the Skywarn and Favorites lists in case that is what is assigned to your channels.

If you don't have the channels assigned to anything, assign them to a ScanList (say ScanList 01) and then enable it by hitting the '1' key.

454. HELP !!! in Los Angeles Co, CA

Yahoo group: PRO-197
Date: 2010-12-31 16:20:40 UTC
From: penndaw11firefighter
Topic: 454 Message: 454

Ok. I received a new Pro 197 for Christmas. (sure you've all heard this one before) Im trying to program in a UHF trunked system. I have read the manual 100 times-downloaded it long before I got the scanner.
I enter the information and press save. but when Imm scanning nothing happens. I have a Pro 2055 and programmed it myself so I'm not a novice. first a question....as you my know with a uhf system normally you have to enter the perameters :Base Frequency, Spacing...Etc. tried to find on this scanner (Pro-197) no luck. I am guessing I am doing something wrong. I really need someone to talk me thru 1 time and then I should get it.
If you can help !!!! Please E-Mail me and I will give you my phone # or if you live close enough (I'm near Olympic Blvd and Alvarado Street In LA.) maybe we can meet.

Thanks in advance
Mike Barry

The 197 is not the same animal as a 2055. It has a dynamic memory not a fixed memory. One freq or talk group can make a bank, or several hundred, not a fixed 100. There are 42 modes that can be programmed other than Freq, PL, and Text. Read back thru the post. Condsider what software to use. You can learn this scanner really quick if you can see inside it. You can see the whole deal with software. The 197 is a powerful unit and trying to do this by hand and not being able to see the details is going to take a l-o-n-g time. Wishing you the best.

I think you're referring to the FM broadcast band. I don't think it's very important unless you want to tie up your expensive scanner listening to FM broadcast.

Most people buy scanners to listen to Public Safety and maybe business bands, not FM radio.

I don't have a PSR600, but I just checked the ScannerMaster website and found the Pro-197 advertised for $399.95. Unless I'm missing something, it appears that they are indeed selling that model. Here is the link:

http://www.scannermaster.com/RadioShack_PRO_197_Police_Scanner_p/22-501341.htm

Unless you particularly want a PSR600, you could wait for the next great Radio Shack sale and save $100! Just my 2 cents . . .

468. LTR performance

Yahoo group: PRO-197
Date: 2011-01-07 20:56:22 UTC
From: G. Blum
Topic: 468 Message: 468

I was wondering if anyone else has the same problem , My PRO-197 is lacking on performance while scanning LTR systems. I have been trying to scan two system locally (withing 5 miles or so) that I show low signal and barely scan the system. I made sure that all the channels were in proper order. There is no overload problem. I have a PRO-2055 sitting right next to the PRO-197 and it scans the same systems just fine.

That just means the signal on-frequency is not that strong. It could still be affected by other signals in your area. But, odds are it's not an overload issue. Just saying that the ATT test is not conclusive in and of itself.

What are the frequencies?

474. PRO197 and LTR systems

Yahoo group: PRO-197
Date: 2011-01-07 18:22:57 UTC
From: G.Blum
Topic: 474 Message: 474

Good Afternoon,
I notice that my PRO 197 performance on LTR systems is not too good. Does anyone else have this problem?
My PRO2055 way out performs my PRO197 on LTR systems. I have two LTR systeems close by (5 miles or so) one is 460 mhz and the other is at 850 mhz and the performance is exactly the same.

Glenn

From: reach147
Topic: 463 Message: 476

I got one for Christmas as well; as the price was good due to the sale.

I am still reading the instructions on this radio and I am surprised at how sophisticated it is.

For the software; I downloaded both the Arc500 and Win500 evaluation versions.

You also get two free Radioreference.com downloads and the trial version of Arc500 from Radio Shack.

Since I already had a Uniden BC796D (and have an IT background) I was able to program the scanner fairly quickly. Frankly I don't think I have the patience to do it manually :-)

I have been evaluating the software since and believe I am going to purchase a license for the Win500; for me it is easier to use and seems to provide more features for the license cost.

The Win500 is easy to use. I get confused with it but Dan also sent me a link to utahradio.com and they have a how to guide for the win500 and it in plain english and not GREEK like most others. The IT backround helps.

Subject: [PRO-197] Re: GRE 500

I got one for Christmas as well; as the price was good due to the sale.

I am still reading the instructions on this radio and I am surprised at how sophisticated it is.

For the software; I downloaded both the Arc500 and Win500 evaluation versions.

You also get two free Radioreference.com downloads and the trial version of Arc500 from Radio Shack.

Since I already had a Uniden BC796D (and have an IT background) I was able to program the scanner fairly quickly. Frankly I don't think I have the patience to do it manually :-)

478. RE: [PRO-197] LTR performance

Yahoo group: PRO-197
Date: 2011-01-08 17:28:51 UTC
From: Glenn Blum
Topic: 468 Message: 478

After a little experimenting I would have to say it is a overload problem. I disconnected my outdoor discone and used my radio shack 800 mhz ducky antenna and everything is working good. I just don't understand that this radio overloads easily. My PRO-2055 is just the opposite.

Subject: Re: [PRO-197] LTR performance

Nothing is jumping out at me. I do see you have Auto-Place enabled. You should turn that off since you have the LCNs.

All I see loaded are LTR systems. What are you comparing it to? Are you having the same problem on all 5 Systems? What are the other frequencies in the 450 and 850 bands like?

479. searching for talkgroup ID's

Yahoo group: PRO-197
Date: 2011-02-04 18:11:43 UTC
From: howardp
Topic: 479 Message: 479

I am wondering how to search for talkgroup id's

I have the control channels and system freqs already programmed into the scanner but

I was wondering how to locate a talkgroup id I have most of the system talkgroup id's already programmed but there are some missing.

I know undies scanners can look for id's

any help would be nice

480. Re: searching for talkgroup ID's

Yahoo group: PRO-197
Date: 2011-02-05 15:12:05 UTC
From: Fred
Topic: 479 Message: 480

You would need to program in a wildcard talk group. While scanning, any talk group not already programed in would trigger the wildcard and show the new talkgroup ID.

I have always wondered about this too. On my 996T, new talkgroups are clearly identified by not having the alphatag I have assigned to ones I have already programmed in. However, on my 197 using a wildcard to search for new talkgroups, I often get ones I have already programmed in (but without the alphatag I assigned). In other words, my wildcard doesn't distinguish between ones I have or haven't already programmed in. Because of this, I have to use the 996 to actually find talkgroups I don't already have. Maybe there is a setting on the 197 that I have missed that will accomplish the same thing?

Topic: 479 Message: 482

I set up what I call my "search list". I programmed in all of the talk groups that I knew of for that particular service, locked them ALL out then added a wildcard at the end of the list. By doing this, only the ID's I do NOT have programmed in will trigger the wildcard.

I set the chirp and flashing LED to get my attention when I got a hit. Any time a new talkgroup ID keys up, the scanner locks onto it and flashes the LED and chirps twice. Usually, I am close enough to hit the store button and record the find into memory.

It's actually pretty easy. Assuming that you have properly entered a TSYS radio system into your scanner, then press the PGM key, press NEW, press TGID, then navigate to the TSYS radio system you want to search for Talkgroups on (assuming you have more than one TSYS programmed), then press the SAVE softkey. By default, the radio sets the TGID as 'wildcard' unless you override it with some other TGID. I've found a few new TGIDs this way, myself.

On a related note, has anybody ever heard any radio traffic with a PRIVATE type rather than the GROUP type? I imagine lots of those conversations have the potential to be interesting.

They have the potential to be interesting, but around my area are very boring (mostly used by public transit). However, it's a good idea to program in a private TGID just in case.

From: Michael B
Topic: 492 Message: 492

When programming the systems in the scanner do you only need to input the control frequencies or all the frequencies for the trunk system including the control frequencies. I have them all in there and the programming software only took the control frequencies listed on RR and put them in there. I added them in later when it seemed like I was missing something. I am using ARC-500 to program it, or at least that is what I think the software is called. Thanks, M B

Hi
I just bought a Radio Shack PRO-197 for 289.99 BRAND NEW in the box
and it receives BETTER than my 1 year old Uniden 15X and the Pro197/psr600 are ALOT easier to program than the Unidens< I also
Purchased a GRE PSR500 and I'm haveing very good luck with that HH
as well GRE does make a great scanner I still have my Radio Shack PRO-32 made in 1987 and it still runs fine !
I had to update the DSP and the uP in the pro197 very easy to do BUT read the manual !!!!

Joe, I don't recall setting a scanlist for the channels just the talk groups. When in the scanlist assigned to the talkgroups the frequencies are picked up. Just does not seem like it is trunking correctly.

If it's a Motorola or P25 system then you only need the active control channel. Many people choose to program in all of the channels so they are covered in case the control channel changes. If it's EDACS or LTR then you need all the channels with the proper order and numbering also.

If you want to REALLY enjoy the PSR-500, buy a GRE800 or RS800 duckie (same antenna, different branding). It REALLY improved my reception for only $19.95 + s/h.

Actually: Active control channelS since many systems rotate them. A typical system will have two to four control channels. You should program them all. On Radioreference, these will be the red and blue frequencies on their system frequency lists.

Hi

I just bought a Radio Shack PRO-197 for 289.99 BRAND NEW in the box

and it receives BETTER than my 1 year old Uniden 15X and the Pro197/psr600 are ALOT easier to program than the Unidens< I also

Purchased a GRE PSR500 and I'm haveing very good luck with that HH

as well GRE does make a great scanner I still have my Radio Shack PRO-32 made in 1987 and it still runs fine !

I had to update the DSP and the uP in the pro197 very easy to do BUT read the manual !!!!

Topic: 500 Message: 501

I don't think you can do that manually but I could be wrong. I would say your best bet is to download win500 or ARC500 and use the software to upload the V-Folders back to the radio. I have attached the V-folders that came preloaded on the radio to this email. If you have a cable or can borrow or buy one I'd say go for it and use the free week trial of one of the software packages I mentioned above to load them in and you good to go. IMO WIN500 is the way to go, but they both work good for that model radio.

Let me know how it goes,

Bob

502. Audio flutter during Trunked reception

Yahoo group: PRO-197
Date: 2011-03-25 12:31:48 UTC
From: Tim Stuart
Topic: 502 Message: 502

Hello,
I have one of the VC TSYS loaded and while monitoring, I get an audio flutter (or cut-out) that is at a regular interval of 3-4 per second.
At the same time, the [T] icon in the top left flickers in step with it.

The TSYS in question is :

Location: Plano, TX
County: 2 counties
System Type: Motorola Type II Smartnet
System Voice: Analog

http://www.radioreference.com/apps/db/?sid=63

Other conventional objects(HAM, etc..) scan and come in good.

Antenna is good with a very good 2 week old pre-amp (850-880MHz 20dB gain, .5 dB NF)on it.

http://www.advancedreceiver.com/page12.html

At first I thought it was priority turned on, but that is off, indicated by the lower case "pri" on the right.

Audio and [T] icon flicker the same with/without pre-amp inline.
4 bars without pre, 5 bars with pre.

All group info was loaded from VC and not changed. The ID's match who is talking (i.e. dispatch, mobile units).

Maybe is has something to do with the "analog control data" that the Moto sys is putting out ???

Or is the scanner checking the other control channels ??

Stumped,
Tim S.

Sounds like the way the signal is coming in. Are you using an outdoor antenna?

Yes, I am using an outdoor antenna. It is the Rat shack scanner dis-cone.

I get the same problem with the bnc orignial whip also.

Thanks,
Tim

Do you use software to load folders?
(I don't know how to check this manually)

Look at whether "multisite mode" is set to roam or stationary.
Also, check if the scanner checks all control channels.

After further thought, those should not effect the scanner while listening to transmissions, so forget that.

Have you tried moving the scanner a little? It might be the result of multi-path nulling. Every few seconds the signals overlap just right and cancel each other out.

Just my thoughts.

Oh, yeah....

Check to make sure the weather alert is turned off. That will cause the audio to cut out too.

My pro-197 does something *very* similar when listening to a certain
low-band
conventional system - so this might not have anything to do with trunking.

I haven't had a lot of time to go looking, but in my case, though I'd
swear I'd
turned off the various priorities and alerts, it sounds an awful lot
like it's doing
a priority check.

But the strange thing is, I don't think I've encountered this on
anything other
than that particular low-band system... (and, I know what the SoCal'ers
are
thinking - I've already ruled out the vehicular extenders).

Give this a try. Shut off AGC it seams to smooth out the p25 stuff . Also you may have to much gain and have some overload see if att helps .

I should have been a bit more specific - it's a conventional, analog system in my case.
Not overload, and I can now confirm all the various priorities and alerts were off.
BUT - as I was playing around, it hit me - I am more than likely getting clobbered by a
spur from one of the other scanning receivers in the shack. Now I have to figure
out which one and under what combination... 8*)

Does anyone know how to change the alert tones. I'd prefer to use DTMF tones that I create. I've run out of useful or tolerable alert tones which the 197 comes with. I'm already using Chirp, Quick Chirp, Fast Hi-Lo, but I had the last straw when I used the DTMF # tone... nothing like hearing BRRRRP on every transmission...

Thanks, Daniel.

I don't think you can modify the tones - you can just select from the factory-programmed tones.

Most difficult I've done was a P25 and Win500 did that for me.

Sorry

for my EDACS i used win 500 and i have EDACS STD selected under type of system. The box for AGC selected. Supertrack selected.

and all the freqs entered for that system.

then for the talkgroups you can just put a wildcard in and have that get all the talkgroups as they come or put in yourself.

why dont you download the free win500 or arc500 to do it?

hope this helps??

rich

Scanlist 21 and 22 are the Skywarn and Favorites lists respectively.
Access them via FUNC-WX or the FAV button, again respectively.

Could it also be that you are listening to a Simulcast system? I have this problem where I am. Where a 3 site system transmits from all 3 sites at the same time and the scanner has a hard time picking out the signals.

There are times when signals are good and some garbled or fades out.

Rick,

Just a thought, but have you considered putting up a DIRECTIONAL beam antenna that might 'null out' those transmitters that are causing you grief, while at the same time, increasing the gain of the transmitter that your beam is pointing to?

Henrik.. i am iside the city and i believe there are 7 cell transmiters for the metrosafe system ...so i have set my multisite param to stationary to try and work the one that has the strongest signal ...after making that adjustment it seems i have the most problems with the mobole units ..since i changed to stat the base stations seem to be better so far.

Thanks

To be honest, none of what you are saying makes any sense to me.

I manage a Motorola Smartzone Simulcast system myself.

If the problem has anything to do with the fact that the system is simulcast then all transmissions should be affected at your receiver. The fact that you say the mobile units are bad makes me wonder if you are actually listening to the mobile transmit frequencies instead of the base station transmit frequencies.

Are you certain you are trunk tracking the system?

If the system has a serious simulcast issue, the users on the system should be experiencing the problem also.

The stationary feature should not be necessary on a simulcast system. I believe that feature is primarily intended for listening to a multi-site system, which is not the same thing as a simulcast system. On a simulcast system the multiple transmit locations are seen by the radios as one site.

I wonder if the mobiles have the AGC enabled while the base stations do not. The AGC should be disabled on the scanner or you can get 'competing AGCs' which result in transmissions sounding like they are underwater.

I went back and read the original message in this thread again. Now I am not sure we are discussing a trunked system.

What band is the system on, 800, VHF, UHF?

Is it conventional or trunked?

Are the mobiles repeated by the system?

How do the dispatchers sound?

What system is it?

From: joso62
Topic: 533 Message: 533

Hello,

I've been monitoring our local EDACS standard system for several years with no problems .

Some agencies have started using "Private call"
I programed in a wildcard, I haven't picked up any, even when I know someone is using it.

The only thing I see that is different is the program didn't put a ID number in the far right column.

I'm using Pro-197 pro.

The system doesn't use encryption.

Anyone have any ideas?

Thanks in advance.

joso62

Double check your wildcard and make sure it is set for "Private" IDs rather than "Group" IDs.

536. No Signals.

Yahoo group: PRO-197
Date: 2011-05-19 04:09:16 UTC
From: Dan Riley
Topic: 536 Message: 536

Hi,

I just got a PRO-197 from a guy on eBay. It appears to be working but it won't pick up any signals.

When I got it today, I cloned it to one of my PRO-106s. It took the cloning but I couldn't get it to receive anything. I then activated the WX button, Nothing. Whoever this guy was, he must have screwed this scanner up. The trunking indicator does not come on. The radio keeps scanning but does not pick up any signals.

Any suggestions on how I might remedy this problem? I have other 197s and they were all cloned to my 106. All of them work just fine except for this one.

Any help would be appreciated. Thanks!

Dan

Just to be certain you're starting from a stable beginning point, I'd consider reflashing the CPU and the DSP code to whatever the latest and greatest versions are. That would load default values into all of the internal registers, for sure. I think the latest CPU is 1.8 and the latest DSP is 1.4, but don't quote me on that.

Do a firmware update:

http://www.radioshack.com/product/index.jsp?productId=3348288

Scroll down to the Product Update tab.

There are two dated May 12, 2011, one is the directions the other is the update.

The general answer is no, as they are somehow different. There was a discussion of the version 1.9 upgrade and one person posted that they had successfully used the gre upgrade on a rs scanner. All other persons of knowledge state that you can only update firmware gre to gre and rs to rs. Radio Shack usually posts the upgrades a few weeks after Gre.

Hi Dave and John
who answser my cpu update question
OK i'll use the RS firmware for the RS pro-197 and the GRE firmware for the PSR-500... I dont want to create any bricks !

Thank you both for the info

546. Low audio fix

Yahoo group: PRO-197
Date: 2011-07-26 22:02:59 UTC
From: Scott Taylor
Topic: 546 Message: 546

Hello,
Don't know how many of you have been going through the same issue that I have with my PRO-197 with low audio. Turning the volume up all the way would result in what normally would be about 1/10 of a knob turn.

I was having to 'thump' the scanner with my hand (almost slapping it) and then the audio would come back full volume for a few mins, and then fade back out.

So, I took it into my neighborhood Radio Shack and explained the issue, they simply took my scanner from me and handed me a new one. Problem fixed.

Not sure if the person has customer service on their mind or was just an idiot, either way I'm happy. Connected my USB programming cable, ran WIN500, 30 seconds later my new scanner picked up where the old one left off....only loud and clear now.

I asked GRE about this once. They said the GRE CPU will not except firmware for the RS scanners and vice versa.

Hello!
I live in a small town.
I only want the local PD dispatch.
On my analog unit I would get, maybe, one transmission each 5 minutes or so. Now I have the Pro-197, it is programmed properly for this one channel but I only get one transmission every hour or so. Just when I thought I had done something wrong or not done something I should have done....I got two transmissions. Then another in over an hour later. I live 2 blocks from the PD. The PD switched over to digital just 2 weeks ago.
Thanks

It looks like the PD is operating on a digital (mototrbo) system which basically can not be monitored by any scanner although it seems they are also using a conventional P-25 digital on the same frequency. Look at this link and see if they match what you have programmed. Do you hear any PD type traffic or just station ID type traffic?

Yes, P-25 gives me 155.55000 and thats what I have programmed into it. Seems like the only transmission I rarely get is related to animal control. At least I'll know when my Golden is wandering the neighborhood. I also get occasionally is the Sheriff's transmission that I'm not interested in. This is a small town and knowing what Andy and Barney are up to is about all there is to do here.
I put my scanner up on eBay for $210. If I can't sell it, oh well, it's interesting looking "eye wash" inside my car.
Del in Poplar Bluff, Mo.

I find it hard to believe they would encrypt a
signal in the 150 MHz range. It's usually in the
800 to 900 MHz frequency range. Oh well, I guess
they can encrypt a signal in any range they want.

I looked for your scanner on eBay. I couldn't
find it. Did you list it yet? If so, I'd be
interested in taking a look at it. Hell, I may
even buy it from you! You have a PayPal account?

From: Henry
Topic: 556 Message: 556

My PRO-197 is a joke. I even was dumb enough to buy the software. I have not got so much as a signal other than noise. I have a Yaesu two meter which I programed my self and it works. I can put the same Freq. in both, the two meter which is 5 watts of power on a rubber ducky will pick up a station and nothing out of the PRO-197. When I bought it at Radio Shack the salesman said it would receive police calls, wrong again. The police here use P25 and this scanner cannot receive those Frequencies. I lose again.

Where are you from. I know the Franklin County and Rocky Mount, VA police departments are on P25 and I pick them up fine with my Pro-197.

You may not like this, but the problem is most likely user error.

There are no such thing as "P25 frequencies". P25 is a mode that can be used on any frequency, and it can be conventional or trunked. It can also be encrypted on either format.

A common problem is not assigning a frequency to a Scanlist, or not having that Scanlist enabled. Programming a modern scanner is much more complex than programming a 2M HT.

The Pro-197 is one of the better scanners presently on the market. You either have a faulty unit or the programming is faulty etc. The P-25 decode is probably the best on the market unless your trying to listen to some type of digital (Like Pro-Voice) which is un-monitorable by any radio. The only other possibility is you are having the front end overloaded by interference on what ever frequency you are trying to pick up. Scanners in general have to receive a wide range of frequencies and are sometimes prone to overload. Try using Attenuation on that frequency or if you bought it at Radio Shack take it back and get another one.
I have owned scanners since the 70's and own 2 197's and have used them in my car from Maine to Florida almost flawlessly, so the problem is on your end.

Front end overload will never be bad enough to block a portable that is
less than 100 feet from the antenna.

What happens if you push the 'weather' button on the scanner? If you don't pick up anything, it's mostly likely a defective scanner. If you do get weather, you most likely have programming issues. The 197 isn't the easiest scanner to program, but works fine once you get the hang of it. Also, the antenna that comes with it isn't the best in the world.

Forrest

i bought one of these scanners, and downloaded the TxWARN system from radio reference, and it will only hear whats in my county, nothing else. has anyone ever had this problem? i downloaded the latest version of the firmware this afternoon. with TxWarn, you should hear anyone on the system, but i cant.

564. Dumb Question

Yahoo group: PRO-197
Date: 2011-09-27 00:44:44 UTC
From: Wyes Guy
Topic: 533 Message: 564

I tried asking this question to the Pro-106 list, but with all their junk mail, problems, I never saw it post, and certainly never saw any repsonse. So, since they're essentially the same units, I thought I'd ask this question here.

I had run the slalker on my Pro-196, to see what signals I might pick up nearby. I'm ready to go back to monitoring only my active scanlists. Is there something I need to do to not have stalker running any longer? It doesn't simply stop when the unit is powered down and back up. The result is that I currently hear stuff I have no interest in, such as guys directing traffic around construction areas. It appears as though I'm scanning only the 3 scan lists I want to hear [the display looks normal], but the hits indicate stalker on things that are not included on my scan lists.

Thanks
Karl

FYI, the sister list to this one is
<<http://groups.yahoo.com/group/RadioShackPRO-106>>
and it has no spam. (well, very very little, and spam is not tolerated -
the last spam was a list member promoting a competing list)

When you press SCAN, it stops Stalker mode. The two are mutually
exclusive. Of course, you can program it so it includes Stalker when
scanning in which case you would have to lock Stalker out.

Thanks Joe, I must have done just that. When I press scan I still pick up other than my intended scan list items. Can you guide me how to lock Stalker out? I hope it isn't the process of locking out the unwanted hits I see each time I turn the scanner on. Those lockouts aren't carrying forward; I have to re-do each lockout every time I turn the scanner on. [For some reason, this just isn't intuitive for me...]

Thanks
Karl

Just an FYI... I did send my earlier email on this subject to the address shown below. And I did see the exchange about a new list you mentioned.
To: 'RadioShackPRO-106@yahoogroups.com'

It must be RSPro-106 that I see is getting all the spam, like this last one I saw.

From: Forrest Joyner
Topic: 533 Message: 568

I had the same problem, but I'm very new to the 197. Apparently it treated Stalker as any other scannable object and included it in scan, which was not what I wanted. Like you, I just wanted to turn it off. My quick and dirty solution was to re-program the scanner to the most recently uploaded settings. It didn't answer my question, but at least it got rid of Stalker.

I hope you find the correct answer, but to me it's certainly not a dumb question.

Do you have software? If so, which SW package?

From the front panel, you can hit MANUAL, then scroll through the channels until you find it (scrolling through Scanlists if you know which one it's in). I keep mine as the only thing in Scanlist 20. That way, I know where it is.

But, the easiest way is to read the scanner, then click on the SRCH/SWPR OBJECTS tab, then lock it out from there and reload into the scanner (or, find out which object ID it is, then go directly to that object in the scanner and hit FUNC then L/O (if you're using the default loukout scheme).

Hello,
Just joind the group.
I goofed up the oem vertual memory files and need to restor them
Any win500 files that would do that here?
Did not see any files in the downloads here or at radiorefrance.

Or if someone has a sweet set up runin I can clone from?
Would not mind paying for it.

Got cable, got win500, got new firmware got but no setup.
Need thouse virtual files back the most

You can download the original v-scanner files here although they are
somewhat outdated by now.

http://www.starrsoft.com/software/win500/default.asp#v-scanner

Pressing "L/OUT" only locks out a channel until the end of your scanning session. To fully lock out a channel, you need to press "FUNC" first then "L/OUT" the channel.

It may be the same for what you are trying to lock out.

From: w3iou
Topic: 578 Message: 578

Hi, was just wondering if anyone on the group has programmed a PRO-197 for the Delaware statewide system. If so we could use some help here.

Thanks in advance,, Willie

580. Trade for Pro-197 or PSR-600

Yahoo group: PRO-197
Date: 2011-11-20 18:55:10 UTC
From: kingmike2you
Topic: 580 Message: 580

Hello: I just listed a Yaesu FRG-7000 on eHam and thought I would list it here as well for a possible trade.

I would like to trade my FRG-7000 straight across for either a Pro-197 or PSR-600. I would prefer a unit that is in mint condition with all manuals and boxes. Any software would be icing on the cake. Thanks,

Michael

581. Best Recommendation for Software?

Yahoo group: PRO-197
Date: 2011-11-20 19:03:41 UTC
From: kingmike2you
Topic: 581 Message: 581

Hello: I'm brand new to the group and am planning on procuring either a Pro-197 or PSR-600. I live in Avondale, AZ just West of Phoenix metro area.

I was wondering what the group would recommend as the best software to use in programming either scanner. My goal is simplicity, I don't mind doing a little homework but don't want to read War and Peace trying to figure things out.

Many thanks for allowing me to join this group. I look forward to learning a boatload from you capable guys.
Thanks,
Michael

You should be able to lock out some of the overly chatty talk groups and still get the good stuff.

With P25, each talk group can be locked out individually. If you have all the talk groups you want programmed in, lock out the wildcard. You can always go back and unlock them whenever you want.

As far as one service domination all the rest, that is pretty normal. I had to lock out one county SO because they were on the air constantly and I couldn't here anything else.

Only other choice is to buy another scanner and leave that group out.

589. Odd Display

Yahoo group: PRO-197
Date: 2012-01-07 02:15:02 UTC
From: Wyes Guy
Topic: 589 Message: 589

Maybe some of you have observed this, but I am looking at my display which is backlit and showing all of the text in mirror image format. Any idea what caused this? Thought I'd ask before I reboot the unit, to see if it clears up, but noticed the scan was locked on an unfamiliar tgrp, and all I was hearing was just hiss. So, I had to shut down and power back up to scan. Seerms to be back to normal now. Not sure if display reversed when the scan locked on that tgrp, or if the dispaly had been reversed for some time. This unit runs in monitor mode most of the time, so I don't often check the display.

Thanks
Karl

Mine will sometimes get the mirror image characters, and other times it will replace all the characters with square root symbols. Turning the unit off and back on has always cleared the problem for me.

592. Help with manually programming Pro-197 Trunk Groups

Yahoo group: PRO-197
Date: 2012-01-12 19:21:25 UTC
From: kevin.pancake
Topic: 592 Message: 592

I am a long time public safety two way and scanner user that recently purchased a Pro-197. I've manually loaded all CONV freq's easily, and I'm close to success with my first trunked group, but I'm obviously overlooking something simple. I am not using cable and software because I am a Mac user.

I am working with Ohio MARCS, trying to program multiple tower sites in a county for a particular Patrol post. If someone has a good grasp on this and could provide a little insight, I'd be greatly appreciative. I'll provide specific data once I hear from someone. Thanks...

Kevin,

I too am a Mac user, but I do use my Mac with my Pro-197.
The way I do this is to install VirtualBox, it's a free application that allows you to install Windows. I installed Windows XP in VirtualBox on my MacBook Pro, and use the USB to scanner cable without problems.

Now I also have purchased Win500 & a six month membership to what ever website Win500 pulls frequencies from.

I know this doesn't really answer your question persay, I'm just sharing how I am using My Mac to administer my Pro-197.

The volume control on your scanner has nothing to
do with the transmitted volume. Strong signals
from a nearby site will come in at high volume.
The weaker ones will come in at lower volume.
There are no adjustments for this, Just set the
volume control at a medium level. I have five of
these scanners and they are all the same.
Sometimes when police officers talk they are
using speaker/mics which degrades the volume.
Their own dispatch can't hear them.

These scanners are excellent receivers. Don't
worry too much about volume levels.

Not really much you can do about this. this problem has been around since scanners have been around. It is mostly dependent on the audio levels that each radio shop sets for a particular department. What makes it more of a problem now is departments are starting to meet the FCC requirements for "narrow-banding" In simple terms once the have Narrow banded they have only 1/2 the bandwidth of their old system which in most cases makes their audio much lower than it was. This is usually not a problem with commercial grade radios but scanners are made to receive most all bands and every type of service. Paying around $500 per scanner rather than $1000's for the top of the line commercial radio makes the difference.

599. audio volumes

Yahoo group: PRO-197
Date: 2012-01-14 20:59:27 UTC
From: Dave Burden
Topic: 599 Message: 599

In the RS manual for the PRO-197 (p 103) it lists an AudioBoost setting for CONV objects. It says that by turning on the setting it boosts the audio by 6 dB when that object is active. I haven't played with it yet but it sounds like it might work for freqs that are weak.

Dave

Topic: 599 Message: 600

The most common issue for weak audio is the wrong mode being selected. When you have a scanner programmed with all channels as NFM, the NFM users will sound weak compared to the FM users. But, if you program only the NFM users as NFM, and the FM users as FM, the audio will be much better balanced.

Yes, some users talk soft, and others talk loud, but the problem I usually find with the audio level complaints stems from incorrect programming.

It does work and I forgot about that. The only problem with it is if you are on the edge of receiving a particular frequency it also boosts the white noise etc. But it does work.

604. PRO 197 Volume/squelch replaced now power hum

Yahoo group: PRO-197
Date: 2012-01-27 13:40:03 UTC
From: bluesky462000
Topic: 604 Message: 604

Hi All
My Freind owns a pro-197 and the volu/squelch control failed completely
no audio at all, so I called GRE and ordered 2 vol/squelch controls
from them, i just finished installing the controll but the new control
is scratchy throughout it travel BUT the audio is LOUD, but now i hear another problem at
full volume there is power hum could be a 60Hz hum
or a 120hz but it is very noticeable YES I tryed another power supply and YES this vol/squ
controls are the excate same as the ones in the GRE
PSR600 any one have any ideas as to what could be wrong...

Ron

They do overheat. Have you noticed there isn't much ventilation?
I have one that after about 10 minutes the volume would so low and
eventually disappear.
I suspected overheating, so I removed the outer case and the sound
worked like new again.
If you have the case off and looking from the top you will see a
resistor very close to where the power plugs in which is raised from the
pc board more than the other components.
It gets so hot that it will burn you in a second.
I'm not saying that's the source of the problem, but removing the case
solved my volume issues.
I have run the 197 constantly for about 3 years now with no problems.

Your problem may not be the vol/squelch control.
I'm an electronics engineer and own 6 of these
scanners. They all work perfectly. However, when
you're dealing with electronics, things do go bad.
I assume you installed the new components
correctly. No radio should be played at full
volume. Of course, when you play the radio at
that level, you will hear some AC hum. This is
normal. The scratchy sound may not come from the
volume control at all. The final amplifier to the
speaker may have been damaged. Or the speaker
itself may have been compromised. The speaker
coils may be burned and thus giving you that
scratchy sound. Although GRE makes the PRO-197,
it is a Radio Shack product. You may want to send
the scanner back to Radio Shack for evaluation.
You can take it to your nearest RS store and have
them ship it to one of their repair centers. The
cost is $20.00 for shipping and evaluation. They
will tell you what is wrong and how much it will cost to repair it.

607. System lockout?

Yahoo group: PRO-197
Date: 2012-01-28 15:57:18 UTC
From: wjay62
Topic: 607 Message: 607

I have a new Pro-197 and have just programmed it via Win500. No problems getting it programmed. I have 2 different trunking systems and here in lies my problem. I can't figure out how to temporarily lockout a system or how to differentiate which scan lists within each system I want to lockout. In other words, if I want to listen to scan list 3 in one system and lock it out in the other system, I cant figure this out. Of course I am talking about doing this manually from the radio - not the software. I have looked all through the manual and can't seem to find where it explains how to do this. Anyone out there know how to do this? I would assume it is fairly easy. Any help would be much appreciated!

Jay

Simple. Change the Scanlist for those channels on the second system something other than '3'. Then you can enable and disable them independently.

There aren't "Scanlist 3"s for each system - there is only one Scanlist 3 in the scanner.

Joe M.

From: Gary
Topic: 609 Message: 609

I have a RS Pro-2096 and am about to purchase the Pro-197. I realize that one of the biggest differences is the amount of channels and the fact that the Pro-197 will follow LTR. What I want to know from all here is this. With the Pro-2096, I purchased the Butel software to program my radio. So, the question . . . is it recommended that I buy the Butel software to program to program the 197???

yup. when you get the 197 you'll get the 'free' version of ARC500. give it a test drive... i think you'll like it.

Robert,

I am not in the area, but I would suggest two things to do to make programming the scanner much easier....

1) Purchase a subscription to RadioReference.com - they have, in my opinion, the greatest resource for the information you need to program your scanner

2) Purchase one of the software packages that are available to program your scanner. Several of these will access RadioReference directly via the software to grab the info to you need to program your scanner.

After trying several packages, I selected PSREdit500 to program my 106/197 scanners. I found it the most intuitive to my mind, and it has the RadioReference download feature.

I do not represent either the web site or the software, just a satisfied user of both.

If I remember correctly, RadioReference has a list of the various software programs that will program that scanner. Most, if not all of those programs, have 30 day free trials built into them, so you can download them and play with them to see which one you are comfortable with.

I forgot to add that you will need the programming cable to use the software.

Yes, there are, and I am quite certain Don Starr (who wrote Win500) got the information from GRE, as did all the other software authors. I am also quite certain they had to sign a NDA agreement which means they cannot publish or disclose any information they received.

So, if you want the information, contact GRE like they did.

626. Setting Thresholds

Yahoo group: PRO-197
Date: 2012-04-23 15:47:22 UTC
From: Dave
Topic: 626 Message: 626

I'm not sure about where to set the upper and lower thresholds.

Can't find an explanation in the manual of exactly what thresholds are being set or any suggestions or default sittings.

I have a trunked system installed and is working pretty good. It is an Oklahoma statewide system.

Thanks for any help on this question.

Dave NB5B

From: Mike Vander Veer
Topic: 626 Message: 627

The thresholds are used in Multi-Site ROAM mode to help the scanner determine which site it should monitor. The threshold values are based on the decode percentage from the control channels found.

The values are somewhat subjective as they vary from person to person. The threshold high value is used to qualify a tower. If the decode rate of the control channel is at least this percentage, the scanner will track that site.

Once the scanner finds a site, it will stay there until the decode rate drops below the Threshold Low value, at which point it will go looking for a new control channel to monitor.

634. Programming MARCS

Yahoo group: PRO-197
Date: 2012-04-29 22:33:30 UTC
From: kd8hwg
Topic: 634 Message: 634

There are 4 MARCS sites in my home County.

Dresden (4 freqs)
Duncan Falls (4 freqs)
Bloomfield (4 freqs)
Zanesville (5 freqs)

When I do the programming, do I program each site location as a separate TGRP or just 1 TGRP will all the freqs?

Thanks.

635. Re: [PRO-197] Programming MARCS

Yahoo group: PRO-197

From: Brad Steinman
Topic: 634 Message: 635

1. I think you mean 'TSYS' (Trunking System) instead of 'TGRP' (Talk Group).

2. The normal method would be to put all the frequencies into one TSYS and create TGRPs associated with that one TSYS. It is easiest to manage your TGRPs this way.

That said you could make each site its own TSYS. However each TSYS would have its own TGRPs associated with it; there is no sharing of the TGRP objects between the TSYS objects. This configuration can give you some additional control of which sites you are listening to however it increases the administrative burden of managing a more complex configuration. Also more storage space is used if you are duplicating the same TGRPs in different TSYSs.

There are some options as to how the scanner monitors the various TSYS control channels (and thus sites) you are be able to receive. Check out the following URLs for more info and/or search radioreference.com for "Check all CC".

http://forums.radioreference.com/radio-shack-scanners/219678-multiple-ccs-same-scan-list.html
http://forums.radioreference.com/gre-scanners/158110-psr-500-check-all-cc-no.html

From: Gary
Topic: 630 Message: 636

The overload problem with the PRO-197 is usualy in the VHF-HI band. It can usually be solved by placing an FM broadcast band filter in the antenna feedline right at the back of the 197. I had the same problem hearing most of the VHF-HI band unless the signal was very strong. I can't tell you were to purchase a filter as I built my own and it works well. I can now hear what I wasn't hearing before.

Good luck

It's capable of it, and you don't need to download anything.
Just program the channel for NFM rather than FM and that's it.

Come the end of the year, in theory all Part 90 (Public Safety, business, and Industrial) users should be using NFM in the 136-512 MHz bands. (Note: This may be changing to only the 136-470 MHz bands)

Brad: Yes I did mean TSYS. Thanks for the information and links.

Is it true that I just need to program the control channels and the voice channels will be found?

Again these are the sites:

Dresden: 866.75000 867.22500 867.86250 868.38750c
Duncan Falls: 866.77500 867.27500 868.12500 868.60000c
Bloomfield: 866.07500 866.47500 866.92500a 867.20000c
Zanesville: 866.28750 866.96250 867.73750a 868.20000c 868.43750

So, do I just program the ones with the c or all of them? If all, is there a specific order in which they should be entered?

You only need to enter the control channels for the MARCS system. The radio will automatically determine the voice frequencies for you. Also check the following link http://forums.radioreference.com/ohio-radio-discussion-forum/192938-understanding-how-ohio-marcs-works.html .

The ones with 'c' beside them are the primary control channels, the ones with the 'a' are the alternate channels, and the ones with no letter are the voice channels. My suggestion is put all of the 'c' frequencies in first and then if there is room put in the 'a' ones after them. Additionally I would put the frequencies for the sites you're more likely to monitor towards the top of the list for that TSYS; it may speed up your scanning of that TSYS depending on which TSYS MultiSite mode you configure for that TSYS object.

Per recommendations by others on RR - In some configurations I've removed the 'a' frequencies from my MARCS TSYS object so I can include more 'c' frequencies to gain more access to sites. Evidently the situation where the control channel data stream changes from a 'c' frequency to a 'a' frequency is rare enough to warrant removing the 'a' frequencies if you are eclipsing the 32 frequency limit on the TSYS object.

I also highly recommend using a software program to program the PRO-197. My personal preference is Win500 although some prefer ARC500. Both have free trial periods. The ability to download Radioreference.com data into the radio is extremely useful and can save you ALOT of time; especially when programming large trunked systems like MARCS into your PRO-197.

From: Jeffrey
Topic: 643 Message: 643

Greetings All,
Well, lets start off saying I have been a scanner listener since I was 13 and currently 39. Been a licensed Ham since '91 and still big into Scanners and Ham radio. Currently, own and run the following

PRO-2051 which is linked to Radio Reference for a live-audio feed for LITH PD, FIRE, and EMS.
(2) PRO-2067's
BC796D in the mobile.
PRO-2039 in Shack
PRO-94

Used to own the BC996T but sold it. Had so many features that I didn't use and felt like it was just a wait for me.

Looking for a Digital scanner for the house.. do you all think the PRO-197 is worth getting for the $$$?

What is the newest and greatest Digital BASE scanner these days? and if you all suggest the PRO-197 I guess I will grab one.

Current generation digital scanners include:

PRO-197
PSR-600 (same as the 197)
BCD996XT
HomePatrol
PSR-800

There is also a Radio Shack equivalent of the
PSR-800, but I forget the model number offhand. (PRO-18?)

The last two are scanners primarily targeted to users
who don't know or want to learn how to program scanners.

As for which one is best, that will depend on what features you want.

One comment about Radio Shack. I bought a second 2096 several years ago on their final closeout and recently had sent it into their Texas repair facility for repair of the keypad. They sent it back saying they no longer service this radio. I contacted GRE who made the radio and they also refused service as their contract with RS forbids them from servicing any RS radios made by GRE.

Bottom line is I will never buy another scanner from RS again. Much safer to buy from GRE directly. Good luck, Gil

I also am a ham radio operator since the early
'60s. Got my Extra back in '98. I also have a lot
of scanners in my place. I've had them all. From
the crystal radios from the 60s and early 70s to
the latest ones on the market.

I own 7 PRO-197s and they are the best digital
scanner on the market today. Some may disagree
with me but I've had the Unidens 996Ts and the
396Ts and sold them all because they didn't work
as well as the Radio Shacks. Also have 3 BC-796Ds
but they do not work as good as the 197s. If
you're looking for a good digital base scanner,
go with the 197. I've got 4 PRO-106 handhelds too. They're all as good as gold.

From one Old Man to another. That's my best advice.

I also have a Pro-197. The biggest problem I had was the pre-programming. I found it useless
most of it was incorrect (just plain old and in bad need of updating.) But if your going to program it yourself the yes it is great. Of course for about the same money (if you go through an internet dealer) you can get the PSR-600.

As you slide down the banister of life, may the splinters never point the wrong way...

One comment about Radio Shack. I bought a second 2096 several years ago on their final closeout and recently had sent it into their Texas repair facility for repair of the keypad. They sent it back saying they no longer service this radio. I contacted GRE who made the radio and they also refused service as their contract with RS forbids them from servicing any RS radios made by GRE.

Bottom line is I will never buy another scanner from RS again. Much safer to buy from GRE directly. Good luck, Gil

658. Programming Question

Yahoo group: PRO-197
Date: 2012-05-29 07:20:58 UTC
From: Mike
Topic: 517 Message: 658

Hello Group,

I have been pulling out what little hair I have left trying to figure out the following issue with my PRO-197. I primarily use my scanner to monitor the Ohio MARCS radio system which is a Motorola Type II SmartZone Omnilink System. My problem is that I want to program each site as a separate system in the scanner but want to only have to program the talk group aliases once and use them for all sites. I have not been able to figure out how to do this, I program all of the talk group aliases for each site and I am on the verge of running out of memory in the scanner. I did not have this problem with my PRO-96 and only had to program the aliases once and whatever site the scanner stopped on it would read from the one pool of aliases, any help would be greatly appreciated. If anyone would like to email me with the answer I can be reached at w8vfd.mike(at)gmail(dot)com.

Thanks

Mike

Anyone, from Illinois area? I would love to get your data file for the PRO-197 and upload them into the radio. This way I can have a basic start and then I will edit what I want inside the unit.

If you can do this awesome please let me know

Currently using the Radio Shack scanner software until I get some $$ together and purchase something better.

Don't use the Radio Shack program to program your
scanner. It sucks!!! You can download Win500
which is a shareware program. It's free to
download and you can use the full version for 30
days. Then you have to register it for about
$30.00. It's the best program for the PRO-197. I programmed all mine with it.

Check the Radio Reference site for data on your
area. The beauty of Win500 is that it can be
integrated with the RR files. Good luck.

Hi Mike,
Unfortunately the PSR600 and PRO197 do not let you set up a trunking system like that. You will either have to assign each site a quick key and attach all your talk groups for the sites in each quick key with the system. Or you can enter all the control channels for all the sites into 1 system list and set the system to roam. You may need to tweak the hi and lo thresholds for the system control channels so you only get the strongest control channels when mobile. If you need further assistance contact me off the list and I'll send you my phone #, we can definitely get you set up easier over the phone.

Good luck and I hope this helped,
Bob

No software came with it... I went to Radio Shack site and downloaded it. Just downloaded WIN500 and testing that out.. READS well but won't upload to scanner yet. Errors out but the GRE/RS ARC500 uploads/downloads without a problem. So, might have to do all my editing and all that on WIN500 and save it and UPLOAD it from ARC500 until I figure it out.

667. Anyone using ARC500PRO

Yahoo group: PRO-197
Date: 2012-06-01 12:59:46 UTC
From: Jeffrey
Topic: 667 Message: 667

Hello All,
Recently purchased the ARC500 software for programming my 197. I did this because I liked how you can import the database from Radio Reference into scan lists. Any how I bought the basic version only because I didn't know there was a PRO version. Anyone using the PRO version? If so worth the extra money? Also, anyone know if there is a discount if you go from the basic to the PRO version?

Ok thanks for the info...you know if you press 0 and 1 while booting it will reset everything. Anyway if you press and hold both 0 and 1 while booting you get the MENU but don't see it listed inside there. What is the latest firmware anyways?

672. Volume/Squelch PC board assembly PHOTOS

Yahoo group: PRO-197
Date: 2012-06-02 11:19:03 UTC
From: bluesky462000
Topic: 672 Message: 672

Hi
I just uploaded pictures of the volume/squelch pc board assembley
I had to replace the vol/sq control in my friends PRO-197, it really was not that hard to do ! But i have 2 Certs in in soldering mil/nasa
OK I bought the Vol/sq, Well i actually bought 2 from GRECOM it's the excate same part!!! and fits perfect ! I think they were $11 each
sorry I lost the part number.
I also uploaded VERSION 2.0 Firmware update for the PRO 197 ONLY

I hope this infomation help some people out here

While turning the radio on when the welcome screens shows press "3"

Latest numbers should be as follows,
uP App Ver RU2.0
DSP AppVer RF 1.4
DSP VocVer RF 1.0

Go to this Radio Shack page
<http://www.radioshack.com/product/index.jsp?productId=3348288> and
scroll down and choose the PRODUCT SUPPORT tab.

The lastest version is:

January 12, 2012 PRO-106 (#2000106) and PRO-197 (#2000197) Digital
Scanners (CPU Firmware Upgrade 2.0)
<http://www.radioshack.com/graphics/uc/rsk/Support/SoftwareDownload/2000\
106_0197_V20.exe> January 12, 2012 PRO-106 (#2000106) and PRO-197
(#2000197) Digital Scanners (CPU Firmware Upgrade 2.0)
<http://groups.yahoo.com/group/PRO-197/January%2012,%202012%20%20PRO-106\
%20(#2000106) and PRO-197 (#2000197) Digital Scanners (CPU Firmware
Upgrade 2.0)>

January 12, 2012 PRO-106 (#2000106) and PRO-197 (#2000197) Digital
Scanners (CPU Firmware Upgrade 2.0)
<http://www.radioshack.com/graphics/uc/rsk/Support/SoftwareDownload/2000\
106_0197_V20.exe>

There have been four updates since the Pro-197 first came out in 2008.

Topic: 678 Message: 679

From the Conventional tab, click EDIT then NEW ITEM AT END or
right-click in the channel data area and select that.

You can also select INSERT ITEM if you don't want it to be at the end.
Make sure you select the line where you want the insert done first.

If this is a new talkgroup, do that in the TGRP area in the TSYS Object tab.

Don't forget to write to the scanner when you are done.

I have no clue. All I did was the update and the manager at Radio Shack tried to program it. He got all the frequencies from radioreference.com. On one of the threads there, it has been mentioned that the Radio Shack scanners are the ones having all the issues. And I should have also said that I'm in Miami County, Indiana. Sorry.

You need to be a premium member of RadioReference.com!

With premium membership, a programming cable and Win500 (or similar program), you can download directly into your scanner from a massive database that covers the entire country.

I think Win500 works very well. They all do about the same thing so
really a personal choice. I believe Arc has a 30 day trial and maybe the
others also.

Ooops - and STOR is Store. That stores the current talkgroup in your Scanlist.

It sounds like you are in trunked search mode, and these will display for talkgroups which are not in your ScanList.

Connect your data cable from computer to the pcif port on the front of the 197 and follow the on screen directions. You have to place the scanner in pc mode. Here are the commands. Use the 0 PGM one for updating firware.

The first key must be pressed while the Welcome/Owner screen is being displayed when you turn on the radio.
0, CLR to /erase/ DSP firmware version.Restores factory DSP firmware version. Press *ENT* to continue within 6 seconds.*
0, PGM* to /upgrade/ DSP firmware version. Press *ENT* to continue within 6 seconds. Waits for DSP update program from computer.
Hold *PGM* while turning the radio on to show the Boot version and to upgradethe CPU firmware version. Waits for CPU update program from computer.

Hello
I am sorry.I did not not to appear impolite. I was just getting frustrated.
The system that is being re-banded is a Motorola analog system. I have the
latest firmware in the scanner. I would like to be able to re-band this system
with out affecting other systems that have no re-banded at this time. I have
looked at Radio reference.com and can not find a specific program that will
correct my situation.
Thank you all for answering my post, and again I am sorry for anything that I
may have said.

Thank you Richard. I totally get the frustration. Have you done a search with the model number and "firmware update" with it?
My scanner is now working better than ever. A friend wiped the memory clean on it and manually put the new codes in it. Hearing way more than I did before the rebanding.

All you should need to do is to program the new frequencies into the scanner. The PRO197 is capable of handling the rebanded systems without any special adjustments.

Hello.
The system in question is the Oklahoma State OKWN system. It is Motorola II analog system. I manualy entered the main and alternate control frequencies and the radio does the rest.Now how does the radio know that this site is re-banded and the other systems in this particular scan list have not re-banded yet.

We have a new Pro 197. My husband is the scanner person(has numerous scanners).....I am the computer person.

Is there any site that we can compare the software.....Arc500 and Win500. I know you can download for a 30 day trial of both.....have done that but would like to see a charted comparison.....would that be available?

If you have definite ideas or problems about either, please email us.

Thanks,
Butch & Jo Ann

I downloaded and tested both and the Win500 performed better for me. The software was easier to use and the interface more intuitive.

As far as features, I think they both are very comparable, however if memory serves me the Win500 also offered the ability to provide a web host with a remote client. I thought that was very helpful. Also, in order to get all the features for the Arc500 you need to purchase the more expensive version (they offer two) and I found that annoying.

In any case, at the end of the 30 days I licensed the Win500.

Thanks, you answered many of my questions.

Currently I am using the 30 day trial of Arc500 and Win500.

I have never really used the scanners and I had to do a crash course in "scanner 101" My husband has always rejected using a computer(funny since he retired from IBM) so he was out of his league with this new scanner. I do everything on a computer so I am trying to figure out the softwares.

I joined several yahoo lists and have read all the old messages ...Pro 197, ARC 500, Winn500.....seems many people use both softwares. Not wanting to complicate things, I was trying to choose between the two.

Thanks,
Jo Ann

My choice, and may I repeat My choice is Win500, because of of the ease of use.
Plus if You buy ARC500, to get the same features that are included with Win500 it would cost You $69.99, where the Win500 cost $35.00.

Jo Ann,

Not to complicate things for you further, I use PSREdit 500. I tried several of the trial versions and found PSREdit met me needs. It's all which software you feel the most comfortable with.

If the program has a SAVE AS option anywhere,
try that and note the directory it is using.

Or you can search for the file name.

OK. I have read the manual about 4 times. Looked over the easier to read thing for my 197. Just can't seem to find out why there is not squelch tail when the squelch is turned counter clockwise.??

One of two likely causes:

1. You are trying to adjust the squelch on a trunked system. Trunked systems control the squelch automatically - you cannot adjust it manually.

2. You are trying to adjust the squelch on a CTCSS/CDCSS/NAC guarded channel. Such channels don't allow squelch to come through.

Also, a nit to be sure, it's squelch noise, not squelch tail - a squelch tail is the short burst of squelch heard when a signal drops. But anyway...

The solution is to adjust the squelch on a CSQ channel (one with no CTCSS/CDCSS/NAC, or to enter a frequency in the TUNE mode and adjust it there.

Thanks Joe. It is Number 2. I mainly listen to the local SO,PD,FD here in my area. I have CTCSS codes on all of my conventional freqs. Did not think of that till you mentioned it. I seen it referenced once in the manual but that fact went over the old head, I guess. Getting old!! There is some digital here in the area. There is also the SLERS thing that encrypts everything on most of the FD and EMS channels.
John.

From: de_kb5kwo
Topic: 729 Message: 729

Hi All,

I've inherited a Pro-197 -and am confessing up front that I am totally lost- My last state of the art scanner was a Pro-2006 which was very straight forward and easy.

I think I've found the manual for the 197 online in a download but would be interested in any programming freeware that is available for the scanner. If its a 'can-do' I will want to program it for the OKC Metro and maybe surrounding areas.

Also, maybe someone close and reading this would be able to program my scanner at their convenience.

thanks
steve

There are at a couple of programming software packages that have a 30 day trial period giving you a chance to decide if you want to purchase it.
http://www.psredit.com/
and here http://www.butel.nl/
and here http://starrsoft.com/

734. Unit number is displayed

Yahoo group: PRO-197
Date: 2013-06-05 20:49:56 UTC
From: joso62
Topic: 734 Message: 734

Unit number is displayed when scanning a trunk system.
How do I switch to have talk group name display. (they are programed in)

Thanks,

John S

Do you have only P25 channels in your scanner or do you have conventional channels as well?

If you have both in your scanner, your P25 priority channel will only work when the scanner is scanning P25 channels. If you are on a conventional channel the scanner will not switch to the digital priority channel.

You can have them do both conventional and P25. I do here on my radio. You also have to check box on Win500 or set it to on your radio if your manually programming for it to" interrupt for talkgroups". Make sure you also have Priority turned on.

No idea.

I tried Win500 and never looked any further, just bought it and moved on. If you watch the RR.com scanner programming software forum, there seems to be fewer questions and problems from Win500 users than from PSREdit users. Not saying that is definitive, just an interesting observation.

From: oldtimer4849
Topic: 740 Message: 740

Hi to all.
I'm new to the forum and also new to the Pro 197.
I have noticed the display may flicker from time to time. I don't know if it's just searching or what. It lasts about 5 seconds or so.
Is it normal ??
Thanks guys & gals.
God Bless +

I have six of these radios around my place. On
certain occasions the displays do flicker. This
is caused by any of a number of reasons. Power
fluctuations, self-calibration, loose connection,
cold solder joint, etc. If the problem only lasts
for 5 seconds, like you say, then it's probably
nothing serious. If the problem persists, then I
would have the unit checked out by a service
technician. If it is only momentary, then leave it alone.

Yeah, I know. They lost one of my 197s and RS had
to replace it. They hire mostly foreign techs who
don't know what they're doing. A prime example of
this is I sent a PRO-2096 (a predecessor to the
197) for servicing and it came back DOA. All it
needed was a new antenna connector. They sent it
back twice and it still didn't work. They finally
had to give me a new one. Yeah, tell me about it!!!

747. RE: [PRO-197] Display flickering

Yahoo group: PRO-197
Date: 2013-07-22 02:20:14 UTC
From: Wyes Guy
Topic: 740 Message: 747

Well, I have a variation on this scenario. I use my PC to record the audio so I can report neighborhood activities when they arise. I recently bought a new PC and noticed my main screen and the second "extended" screen [which you can run using windows display options] would "blink", sometimes one, other times the other. I returned the PC and the merchant thought it must have been a bad graphics card or a loose connection, and gave me a new PC. The new one did the same thing. I've noticed this phenomenon occurs just as a transmission is coming across the scanner. Any idea why recording audio on a PC would affect the video seen on a monitor or the alternate display? It's highly annoying [acts like it been unplugged and plugged back in very quickly].

Thanks

That actually makes sense if you programmed the rebanding frequencies in without the rebanding tables or firmware. The scanner was hitting the control channel, seeing a TG you wanted to monitor, but found no signal on the (pre-rebanded) voice channel, so it returned to the control channel and started the process all over again.

In essence, the display wasn't flickering - it was changing channels so fast you couldn't tell it was changing.

756. ScanControl 7.10

Yahoo group: PRO-197
Date: 2013-08-29 01:16:17 UTC
From: wxford5
Topic: 756 Message: 756

I recently purchased this software. It appears there hasn't been any support activity (upgrades, fixes, etc.) for quite some time. I thought the Data Grabber feature would be very useful. I've discovered that the Data Grabber appears to be "out-of-date" and doesn't properly handle the RFSS and site tags from RR.com. There is no support for the new "rfss" field in P25 sites, based on the current version (9) of the RR API. It appears that data that used to be in the sites' "zoneNumber" field has been moved to the new "rfss" field. The Data Grabber shifts the information into the wrong fields.

Is it just me, or is this your experience, too ?

> I recently purchased this software. It appears there hasn't been any support activity (upgrades, fixes, etc.) for quite some time. I thought the Data Grabber feature would be very useful. I've discovered that the Data Grabber appears to be "out-of-date" and doesn't properly handle the RFSS and site tags from RR.com. There is no support for the new "rfss" field in P25 sites, based on the current version (9) of the RR API. It appears that data that used to be in the sites' "zoneNumber" field has been moved to the new "rfss" field. The Data Grabber shifts the information into the wrong fields.

Yeah, buyer beware ... 3-D Technologies should have just shut-down instead of continuing to sell "stabilized" software.

I wonder if I can salvage this by clipping the RR.com data into a spreadsheet, renaming the field headers to what the Data Grabber recognizes, and building a new scanner file. Doing this manually with the amount of P25 data I'm after will be a real pain...

759. Here are the new Yahoogroups for the Whistler made scanners for

Yahoo group: PRO-197
Date: 2013-10-04 07:01:25 UTC
From: Brian
Topic: 759 Message: 759

FYI Pro-197 users looking for new scanners,

Here are the new Yahoogroups for the Whistler made scanners for Radio Shack. Sign up to get the
latest info once it's released.
Our great MCH group owner started them for us last month.

Whistler has purchased the intellectual property of GRE American, Inc., and plans to launch a line
of scanners under the Whistler brand. Whistler scanners will include: handheld and desktop/mobile
digital scanners with full keyboard, a handheld scanner with USA/Canada database built in, and two
models of VHF/UHF non-trunking scanners.

Can the programing jack on the front of the radio be used as a line out to stream audio to the pc?

If not, how can this be done? I would hate to try to device a discriminator tap on this radio.

762. Re: [PRO-197] Line out

Topic: 761 Message: 762

The programming jack cannot feed audio. The mods required to use it for an audio feed are much more complex than adding a discriminator tap.

But, which do you need? Simple audio output or discriminator audio? They are two different things.

If the latter, just add a jack to the rear of the scanner. The tap is a mod most people can handle even with modest soldering skills.

Thanks for your reply. Can you direct me to a site with instructions for the discriminator tap. That's what I need. I appreciate your help.

I'm needing to see if I can decode mototrbo with DSD software. It requires a discriminator tap.

If I can get that to work, then I would like to be able to do streaming audio from that system.

I bought a Pro 197 recently and am loathe to figure out how to program it. The last scanner I bought was a Realistic PRO 2003 over 30 years ago. I'm a ham radio operator and am not completely unfamiliar with analogue and digital communications equipment. I have however never had nor used a trunking scanner and am frankly ignorant of the mechanics of the mode. What's worse, I have no P.C. nor immediate access to one, my only link to the cyber world being this cell phone. Thus, software programming is not an option for me. The local police (Las Vegas, Nv.) have for the most part switched to the Open Sky system and with the exception of 3 remaining analog repeaters can no longer be heard on standard consumer receivers. I can no longer hear local F.D. either as I believe they've gone to a trunking system.Anyone who feels they might be of some help would be encouraged to please contact me.Many thanks.

I have 2 suggestions. since you do not have a computer to program it with, try Radio shack is your area. ""Sometimes" they have a service that will program it for you for a price. Call and talk to them to get a feel if they know what they are doing. Second. go to Radioreference.com and see if there is someone in your area that can help you. Try your ham friends on the local repeater. you would be surprised at the folks that listen to scanners.

I have the 197. I was like you, pulling out what little hair I had trying to program it manually. I went with the win 500 software. with the j
help of a local scanner friend and the software it was fairly easy.

780. New whistler models

Yahoo group: PRO-197
Date: 2014-02-20 05:48:31 UTC
From: MCH
Topic: 780 Message: 780

For general info...

April timeframe
WS1010 analog portable
WS1025 analog mobile
WS1040 digital portable (PRO-106 clone - note: not PSR500 clone)
WS1065 digital mobile (PSR-600 / PRO-197 clone)

July timeframe
WS1080 basic digital portable (PSR-800 / PRO-18 clone)
WS1095 basic digital mobile (PSR-900 clone / note is unit was never manufactured by GRE)

Basic means there is no keyboard - just basic controls - like the PSR-800

There are Yahoogroups for the new models as well as the PRO-650 and 651 Radio Shack models which are the 1040 and 1065 units rebranded. For the groups, just use WSxxxx or PRO-65x as the group names added to http://groups.yahoo.com/group/

Project 25 Phase II TDMA modulation can ONLY be monitored using a P25 Phase II compatible scanner. The difference is a hardware issue not software, no radio not already able to monitor Phase II TDMA was be able to listen via a firmware update. The GRE PSR800, no longer being made, was the only one I know of that could listen to Phase II TDMA. Whistler who took over a lot of the GRE line has a similar radio on the horizon. I'm not sure where Uniden is as far as Phase II TDMA capable radios.

793. DG Audio Drop Out

Yahoo group: PRO-197
Date: 2014-06-21 22:03:22 UTC
From: kdavis24@...
Topic: 793 Message: 793

I am having an issue with the audio dropping off before the call is complete. I have a signal of 4 to 5 bars and during the call the audio will just quit and then the call drops immediately afterwards. I have tried attenuation on and off and various antennas from a 6" rubber ducky to a RS discoune mounted about 25' up on my ham tower. It seems to play the best in my basement on the 6" and the worst in my shop on any of the antennas.

I am at App ver: RF1.8, DSP AppVer:RF1.4, and DSP VocVer:1.0. Not sure what all that means but I have not upgraded any of the firmware since I got the radio last Christmas.

It seems to do fine on conventional signals like ham and Wx stations.

Any thoughts from anyone would be much appreciated.

Sounds like you have channel priority, weather priority, and/or signal stalker enabled.

I have a signal of 4 to 5 bars and during the call the audio will just quit and then the call drops immediately afterwards. I have tried attenuation on and off and various antennas from a 6" rubber ducky to a RS discoune mounted about 25' up on my ham tower. It seems to play the best in my basement on the 6" and the worst in my shop on any of the antennas.

I use win500 for programming. It allows you to set a delay for any talk group or frequency. since I enjoy pd and fire, I add a delay to all of those and it carries the conversation past the end 2 seconds.

Buy the programing cable. Don't try to program it by hand. You will be babbling after three days. I was and my buddy Dan helped me out. It's a really good scanner but a bear to program manually. I use win 500 to keep mine going.

I second that. I have both the 106 & 197 & do
almost all of my programming by computer. Doing
conventional entries is not bad, but doing
trunking is something you will rather do by
computer (unless you are some kind of sadist) &
also downloads from RadioReference.
I use Win 500 & like it, but there are a couple
of others out there. Try all of them, they all
offer 30 day free trial & see which works for you.

For sure buy the programming cable and get subscribed to Win500. They both work great together. You will also need a subscription to RadioReference.com to REALLY get your radio programmed in quick fashion. Ken

Hey I solved my issue. It was the lack of an 800 MHz cut ground plane. Found a drawing on the internet, made one and with it no more than 3' off the ground, my digital audio dropping out is fixed. In fact this is the best I have ever heard the P25 systems in Sedgwich and the KHP system What a change. Thanks to all that helped guide me.

The same cable is available from RadioShack as RS catalog #20-047. The only difference between the GRE and RadioShack versions is the color.

This is the one I purchased a LONG time ago and it works. I "BELIEVE" I paid like 20 dollars. Can't really remember as it's been a long time ago.

811. PRo-197 will no longer recognize talkgroup codes

Yahoo group: PRO-197
Date: 2014-08-31 04:03:29 UTC
From: larrykoch@...
Topic: 811 Message: 811

One of my PRO-197s has been working fine for over 3 years on a P-25 digital trunked system. I have police, fire and sheriff talk groups programed. There are about 20 others (jail, courts, animal control, public works, etc) that I don't have programmed. Several days ago the scanner went silent. It still shows it is scanning and when I analyze the control channel it looks good, strong signal, decoding 82-99%.

For a test I programmed all the voice channels as conventional channels. I can now hear all transmission made on any of the voice channels.

I did all the resets and reloaded my profile. No change. Restoring everything to factory settings made no difference. Then I undated the firmware to the latest release. No change.

It appears that everything is OK except it will not recognize any of the talk group codes. Any ideas?

Thanks
Larry

Good questions Joe. Buchanan County Missouri. No rebanding. That was done several years ago.

The control channel is 853.8250. It sounds normal, the usual sound of the data flow. When I go to the Analyz function the display is identical to the same display on my 197 that is working. (I have two PRO-197s) I have set them side-by-side and one works fine and the other doesn't decode.

-197 will no longer recognize talkgroup codes

What system is this for? Could they have rebanded or added a new control channel?

Joe M.
On Aug 31, 2014, at 12:03 AM, "larrykoch@hotmail.com [PRO-197]" <PRO-197@yahoogroups.com>

wrote:

One of my PRO-197s has been working fine for over 3 years on a P-25 digital trunked system. I have police, fire and sheriff talk groups programed. There are about 20 others (jail, courts, animal control, public works, etc) that I don't have programmed. Several days ago the scanner went silent. It still shows it is scanning and when I analyze the control channel it looks good, strong signal, decoding 82-99%.

For a test I programmed all the voice channels as conventional channels. I can now hear all transmission made on any of the voice channels.

I did all the resets and reloaded my profile. No change. Restoring everything to factory settings made no difference. Then I undated the firmware to the latest release. No change.

It appears that everything is OK except it will not recognize any of the talk group codes. Any ideas?

Thanks

Larry

818. Stream & Control your 197 from Android

New app just released lets you listen and control your 197 from anywhere. Use the windows win500 program, your scanner and cables and you can listen and control to your scanner from anywhere on your Android device.

From: n7ejt@...
Topic: 831 Message: 831

I've had my PRO-197 for some time now and it pains me to admit that I'm at a complete loss as to how to program it. The scanner it replaces is a Civil War vintage Realistic PRO-2002, analogue all the way and no problems. I attempted to solicit help from a regional scanner users group but when they found out I had no computer but was (and still am) more than willing to program the thing manually as I do my amateur radios they blew me off. O.K. so now I have a computer and still I've run into a brick wall. The local P.D. until very recently had been using a system called Open Sky which was/is indecipherable on commercial grade consumer receivers. The system proved to be highly flawed and it was dropped in favor of APCO-25. I know the 197 can be programmed for this as well as other trunking systems but I could certainly use some direction.
Most if not all of you users are probably light years ahead of me so should any of you care to help this neophyte I would be beholden to you and would ask that you contact me directly at "n7ejt@yahoo.com" so as not to clutter up this sight.
Many thanks.
Rick

I use win500 software to program mine the software costs 30.00 and they give you a free trial to see if you like it. Also, if you want to program it manually there are several how to videos on YouTube that give you step by step instructions on how to program it, just type in Pro-197 in the search box.

I also went from a Civil War era radio Realistic Pro-2022 to the 197, before that I used the old plug and play crystals, remember those?

I use the win500 software in conjunction with a premium subscription to Radio Reference and programming my Pro-197 childs play. I've never tried programming it without these two. Good luck with that endeavor.

Should you decide to go with the WIN500 software the site I've linked below goes into great detail on how to use it.

Another vote. I've used WIN500 since I got the scanner a few years ago, and a RadioReference.com subscription to top it off is very useful as well.

And I started off in the 70s with a Realistic PRO-2 (B, I think) that was both tunable (like your analog FM radio) and crystal controlled.

From: Larry Hassell
Topic: 842 Message: 842

It has been fixed, I found the answer in Radioreference.com forums, if you use the win500 software and send a file to the scanner with duplicates in it, this is what happens. So I go back and remove two duplicate Talkgroups from the file and then resend the file to scanner and now everything is fine!!

Larry.

Heap Error means there are trunked system talk groups that re not assigned to a scan list. if you click on all objects and scroll down you should see these talk groups with the word "unassigned" beside it. This is if you are using Win500.

846. Programming software

Yahoo group: PRO-197
Date: 2015-03-13 03:21:49 UTC
From: n7ejt@...
Topic: 846 Message: 846

A couple of weeks ago I posed a question in this forum regarding the best way to program my recently acquired PRO-197. Several of you responded by telling me to get the WIN500 program. As I was about to order it I realized that I didn't have the appropriate USB cable-the scanner was an eBay purchase and that's to be expected. I decided against ordering the software until I was able to get the cable. I got the cable. In the past few days however while waiting for the cable to arrive some scanner enthusiasts of the GRE persuasion told me to get a different program called ARC500. I'm looking for a definitive answer here from you people using the PRO-197. If any of you are familiar with the ARC500 software can you please tell me what (if any) the differences are and which I should buy? I'm a neophyte with digital trunking scanners and related programming methods and I will be gladly guided by your advice.
Thanks.

Those programs as well as my PSREdit500 program have a free trial period. What works for me may not work for you and vice-versa. Asking others which is the best is subjective and you'll never get a definitive answer, just opinions...

My suggestion is to try them out and see which one works best for you. They all do basically the same thing, just present the information in a different way. One of them may work best for you.

Mike

I agree with the others, definitely try them all out, see which one you like most. I'll have to throw my vote for Win500 for me, but not just for programming. You can use the Win500 pc software and the Win500 android app to allow remote monitoring and control while away from home. You may need to know some networking skills to configure your network properly, but it works quite well.

Another thing that could help your decision is if anyone in your area already uses one of the applications and has a scanner set up. They can send you the file they use and save you some time. You may even be able to get away with being all set up and done before the trial period ends.

Thanks to you as well Mike. I understand the trial and error concept however at this juncture I'm even willing to be guided by opinion. Nevertheless I'll get one of them first (probably the WIN500) and should I find it either difficult or beyond my ability I'll try one of the others. I'm certain to find what will best suit my purpose. I appreciate your input.

I have to agree with Mike. Programming software is like flavors of ice cream, what you like and what I like may be completely different, but both do the job.

I tried several of the programming software with their free trial periods, and some werer easy for me and the others were like deciphering Egyptian heiroglyphics. I personally preferred PSREdit500 as it was the easiest for me to comprehend. With it and a premium RR subscription programming scanners has become child's play.

My vote is for PSREdit, with a disclaimer, I have never used anything else.
I agree that coupled with the RR database it is super easy.

From: reach147@...
Topic: 846 Message: 855

My recommendation for you would be to download both programs and use the demo / evaluation period to decide for yourself which one works better for you.

For me, Win500 works better for this radio. I find the tabbed interface easier to navigate, more intuitive and superior to the BuTel product.

However, for another radio type (a Uniden), I use Arc536 as it is better for what I need on that particular radio.

856. Re: Programming software

From: soberbyker@...
Topic: 846 Message: 856

When I first got my Pro-197 I tried the ARC500 program before the WIN500, to me, not familiar with new scanners, my previous was a Pro-2022, it (ARC500) was extremely confusing. Someone suggested the WIN500 program and I haven't looked back, easy user friendly interface. One of these days I'm going to have to learn how to program it without software.

857. Re: Programming software

Yes, I understand you completely. My "other" scanner is a PRO-2002 which I acquired second hand about 35 years ago. Frankly if the local P.D. and fire departments hadn't converted to trunking systems I'd still be using it. When I first posted to this group I wanted to program it manually like I do my amateur equipment but I was resoundingly dissuaded from that notion by just about everyone who read what I had written. In my defense however I had no computer at the time. I do now and have likewise just acquired the USB cable as well. I"ll almost certainly try the WIN500 first.
Thanks.
Rick

858. Wanting to trade pro-197 for pro-106 or equiv

Hi all!
I just purchased a PRO-197 and love it, but I realized I should have bought a hand-held. Doh!
Anyway - if someone has a P25 capable handheld and would like to trade for a base/mobile rig, let me know!
It's used (obviously) but comes with mounting bracket, AC adapter and manual.
Thanks!

From: djmukena77@...
Topic: 861 Message: 861

I am considering getting rid of my Pro 197 and getting a Home Patrol 1. I never got a cable to program it and to me it is a pain to program. I have used my father-in-laws Home Patrol and really like how easy it is to program. My first question is what would I be losing or gaining by trading radios and what would be the easiest route to sell it? Thanks.

862. Re: Getting rid of Pro 197

Topic: 861 Message: 862

I have the 197 and the Home Patrol 1, while I love both of them, the display on the HP 1 is easier to read, and you're given more information on the display. How would be the best way to sell it? Try a free want-ad if your local paper offers that, or ebay, that's where i bought the 2 197's I have. Good luck.

863. CPU UPGRADE WAIT FOR PC/IF error

Dear Friends

When I turn on my PRO 197 the display says:

uP Bootver: RF 1.2
uP App Ver: NONE
CPU SW Upgrade
Wait for PC/IF

I´ve got original RS cable, FTDI drivers, and the scanner works properly since 2010.

I can´t access using cpu or dsp upgrades, or win500, or ARC.

When I try tu upload a CPU version I Test and a banner says that SCANNER currently contains NO applications CPU CODE, then I click update and...TIME OUT WAITING RESPONSE FROM SCANNER...

I´m writing from Argentina, where there is not RADIO SHACK or scanners technical services.

Somebody had the same error? Ideas to fix it?

Thansk in advance.

Adrian

RadioRefernce has a list of software packages that you can use to program your scanner. Most, if not all, have free trial periods. What works for some may not work for others. I'm sure we all have our favorites. Those that can pull data from RadioReference are arguably the easiest to use, as the software does the hard part. I personally am partial to PSREdit500 myself.

Win96 won't work for the PRO-197. For programming you would need
WIN500, PSREdit500, or ARC500 for that model.

That being said if you have the cable and someone makes a file for you
that's compatible with PSREdit500, I do have a free backup/restore
utility that will read and write scanner memory between the scanner and
computer at http://www.psredit.com. It's called PSR500DL.

Scanner is 2 years old. I programmed basic frequencies into it, so I do not have it truck tracking. It has worked for the last 2 years without an issue. Last week the "nothing enabled" showed up on the screen & I don't know what to do. Can anyone explain this to me please? Thank you in advance for any help you might have.

while scanning, just press one of the number
keys - for example, key 1 enables/disables bank 1.

Do it via software. You will need Butel’s ARC500 program and a subscription to www.radioreference.com <http://www.radioreference.com/>. That’s the easy way. Doing it manually is “mission impossible” for many (including me).

Lets see if i can explain this correctly If someone needs a gr file for there pro 197 someone that knows how the to program the Scanner with the software after THEY save there Programmied scanner in the V folder
then they could program there scanner to the area that the other person needs, save that file and upload it to t the files are with that person's name it's alot of work but can be done
Also 2 people can download the program TeamViewer and set it up then the person thats going to program
the other's scanner conects to there computer the perso that is getting there scanner programmed needs to have the scanner on with the programming cable plug in an the software on the desktop.
Yeah i know this is hard to follow But i have programmed my friend's pro 197 from my house and he has not have any problems and i can makes changes anytime he lives almost and hour away it's easyer than me
making up a Gr file.

918. not picking up local pd conventional

Yahoo group: PRO-197
Date: 2017-03-06 16:26:37 UTC
From: Todd Bloomingdale
Topic: 918 Message: 918

Greetings,

I am having a issue that I can't figure out. On my PRO-197 I have my city police that is conventional VHF. I put the channel into memory using the correct frequency and tone. When I put the unit into scan, the 197 will not stop on the police frequency. It just will not stop. I have a 2nd scanner next to it to double check that the city police is transmitting. But when I put the 197 into manual from scan and go to the frequency it will pick up. I do have the recent firmware, but have not played with the expert menu's. Any suggestions on how to get this police frequency to stop while scanning?

Todd Bloomingdale-KC9LOX

Is the channel locked out? Is the bank enabled?

no on the channel lockout or temp lockout. Fine there., and yes the bank is enabled that he channel is associated to. Fine there also.

Try programming it without the tone and see what happens. Also check your squelch level to make sure it's not set too high.

I too was going to suggest without the tone.

Also make sure the mode is correct (FM vs NFM).

That is interesting. I changed the tone to search and now is working fine on scan. All data is correct as narrow band, squelch down is fine. So right now seems to be a work around. Thanks for replying to my dilemma everyone.

the million dollar answer. the Tone is showing 156.7 the same tone I put in is the crazy thing. So not sure why it wouldn't work the 1st time adding in. Crazy picky scanner! lol.

it's just a single site repeater only on the transmit. I do know they do have 2 other receive only sites . it's been working fine since i changed the tone to search, but just weird that it won't play nice with the tones inputted.

Here is a link to Radio Reference wiki on updating the 197.
https://wiki.radioreference.com/index.php/Pro-106_and_Pro-197_CPU/DSP_Upgrades

to check what version your scanner is on:
Hold PGM while turning the radio on to show the Boot version

If you haven't already seen this site, take a look at this detailed page on
the 197.
http://new.marksscanners.com/106_197/106_197.shtml

Thank you Todd. I was successful in upgrading the firmware yesterday from 1.8 to 2.1 and happily that little chore is now out of the way. If I can just manage to understand trunking then maybe I'll be able to program the thing. My last scanner was a Civil War vintage PRO-2002 and I suppose I'm still mired in that old analogue mindset. I have a top of the line HF amateur radio (digital/analogue/data etc.) which gives me little problem. Figuring out how to program my 197 though is pretty daunting.
Thanks again.

So the questions that need to be asked:

1. What software are you using to program your radio

2. What other things are you scanning besides this system you want?

3. Can you make your current file available to whomever is able to help?

4. Do you not have a RadioReference subscription and software available to download the system from that site?

Without those questions answered, you may be less than pleased with the results of your request. Since the only thing that would be in the file sent to you, you would lose whatever else you have in your scanner and only get this system since the scanner data is completely replaced by the new information. Probably with everything in one scanlist.

Mike

I have a few manually programed channels, I have no programming to lose because it came to me blank, except the pre-programmed bands.
